1. Introduction

Preface

Dear Customer,

Thank you for choosing PowerMaster-10 / PowerMaster-30, a highly advanced wireless alarm control system produced by Visonic Ltd.

Note: Make sure that you have the name and telephone number of the monitoring station your system will report to. If you ever call the monitoring station to ask questions, you should have access to your "ACCOUNT NUMBER" used to identify your alarm system to the monitoring station. Obtain this information from your installer and write it.

Overview

The PowerMaster-10 / PowerMaster-30 is a wireless alarm system for detecting and alerting in case of burglary, fire and a variety of other security and safety hazards. In addition, it can be used to monitor the activity of disabled or elderly people left at home. System status information is presented visually and verbally*, and in most cases a recorded voice prompts you to take correct action.

The system includes an optional partition** feature. Partitioning allows you to have up to three independently controllable areas with different user codes assigned to each partition. A partition can be armed or disarmed regardless of the status of the other partitions within the system (for a detailed description of the Partitioning feature, refer to Appendix A).

The PowerMaster-10 / PowerMaster-30 is governed by a control panel (Figure 1a and Figure 1b) designed to collect data from various sensors that are strategically located within and along the perimeter of the protected site.

The alarm system can be armed or disarmed by a variety of keyfobs and keypads using special codes.

In the **disarmed state**, the system provides you with visual status information, and initiates an alarm if smoke is detected or upon disturbance in a 24-hour zone (a zone which is active 24-hours a day).

In the **armed state**, the system will initiate an alarm upon detection of disturbance in any one of the armed zones.

Proximity tags enable authorized people to enter restricted areas. Presenting a valid proximity tag, while the system is armed (and when partitioning** is set to disabled), causes the system to disarm. Presenting a valid proximity tag, while the system is disarmed, causes the system to be armed in AWAY (optional HOME) mode.

The system identifies a wide range of events - alarms, attempts to tamper with sensors and several types of trouble. Events are automatically reported via PSTN (telephone line) or optional GSM communication to monitoring stations (in digital or IP form) and to private telephones (in tones and/or SMS messages). The person receiving such a message is expected to investigate the event and act accordingly.

IMPORTANT! All you need to know to secure your premises can be found in Chapters 2 and 3 of this manual.

If you are not familiar with some of the terms used here, refer to Appendix B at the end of this guide.

Note: This system must be checked by a qualified technician at least once a year.

System Features

Your PowerMaster-10 / PowerMaster-30 offers a large number of unique features:

- **Master / User Settings:** Two user levels allow different access types (see Chapter 6. Menus and Functions, section C.4 Programming User Codes).
- **30 detector zones (PowerMaster-10) / 64 detector zones (PowerMaster-30):** Each detector zone is identified by zone number, location and by name.
- **Multiple arming modes:** AWAY, HOME, AWAY- INSTANT, HOME-INSTANT, LATCHKEY and BYPASS.

* Refers to PowerMaster-30 with voice option only

** Refers to PowerMaster-30 only

INTRODUCTION

- **Liquid crystal display (LCD):** Plain-language status information and prompts are displayed on the front panel in large, clear text.
- **Real-time clock:** The present time is visible on the display. This feature is also used for the log file by providing the date and time of each event.
- **Various reporting destinations:** Events can be reported automatically to monitoring stations, private telephones and mobile phones of your choice, and even by SMS if GSM is installed.
- **Selective reporting:** Your installer can determine what type of events will be reported to which destination.
- **Latchkey mode:** An automatic "Latchkey" message is sent to chosen telephones if the system is disarmed by a "latchkey" user (a junior family member, for instance). (See Chapter 2.)
- **Spoken announcements and instructions*:** Status-dependent, pre-recorded verbal messages are heard over the built-in loudspeaker (if the voice prompts are enabled - see chapter 4).
- **Message exchange*:** Before leaving the premises, you may record a short verbal message for other users of the system who may arrive later. Upon arrival, you can listen to verbal messages left by others for you.
- **Access from remote telephones:** You may access the PowerMaster-10 / PowerMaster-30 from a remote telephone and Arm/Disarm it or receive system status information. (See Chapter 5).
*Note: Remote operation is performed per partition, or per user code defined for a particular partition, when partition is enabled**.*
- **Numerical keys serve as function keys:** When the system is disarmed, the numerical keys are used also to control various system functions. A simple icon on each key identifies the task of that key.
- **Data retrieval:** You can obtain status information, trouble information and review memorized alarm events visually. (See Chapter 3).
- **Event log:** System events are memorized in an event log that stores the most recent 1000 events, each tagged with the time and date of the event. You can access this log and review the past events in case of need such as after a burglary. (See Chapter 10. Maintenance).
- **Looking after elderly, physically handicapped and infirm individuals:** The system can be programmed to monitor people activity within the protected area and send out an alert message if no movement is detected in the area for a predefined period of time (See Chapter 6. Menus and Functions).
- **Distress calls:** Miniature pushbutton portable transmitters given to specific individuals may be used for sending emergency calls for help.
- **Disarming under duress:** If a user is forcibly compelled to disarm the system, he can do so using a special code ("Duress Code") that disarms the system as usual, but also sends a silent alarm to the monitoring station (see Chapter 2. Operating the PowerMaster System).
- **System supervision:** All wireless peripherals within the protected site send periodic keep alive supervision messages. If such a message is overdue, the PowerMaster-10 / PowerMaster-30 displays a 'missing' trouble message. Your installer can disable this feature if so desired.
- **Battery supervision:** The PowerMaster-10 / PowerMaster-30 continuously monitors the battery condition of the sensors and devices in the system and displays a 'Low Battery' message whenever a battery needs to be replaced within a maximum of 30 days. Wireless sirens can still provide 2 siren alarms before the siren becomes totally inactive.

* Refers to PowerMaster-30 with voice option only

16		PARTITION: Partition selection

Other Keys

No.	Indication	Function
13		Chime ON/OFF
15		Reviewing the event log
17		Emergency (hold for 2 sec.)
18		Fire (hold for 2 sec.)
19	 	Press both buttons simultaneously for panic alarm
20		PGM control
21		PGM output OFF
22		PGM output ON
23		Volume up *
24		Volume down *
25		Record message *
26		Play message *
27		Mute speaker * / **

* May not be functional on all versions of PowerMaster-30.

** The Mute Speaker button is active only if the "Set Voice Option" function is enabled ("enable prompts" - see Chapter 6, section C.14).

Internal Alarm Sounder

The PowerMaster panel has a high power siren built-in that sounds in case of alarm, to deter intruders and to summon help.

Alarm Type	Graphic Representation of Signal	Verbal Description of Signal
Burglar / 24 hour/ Panic	_____	ON continuously
Fire	--- --- --- ---	ON - ON - ON - pause - ON - ON - ON - pause.....
Test*	— (both external and internal sirens)	ON for 2 seconds (once)

* Not included in all models

INTRODUCTION

General Audible Indicators

The sounds you will hear while using the control panel are:

Sound	Definition
	Single beep, heard whenever a key is pressed
	Double beep, indicates automatic return to the normal operating mode (by timeout).
	Three beeps, indicates a trouble event
	Happy Tune (- - - —), indicates successful completion of an operation.
	Sad Tune (—), indicates a wrong move or rejection

Other Audible Indicators*

Pre-recorded voice announcements respond to your commands by announcing what the system is doing and by prompting you to perform certain actions. They also announce alarms, troubles and identify the source of each event.

Audible Indicators*

The pre-recorded voice announcements respond to your commands by announcing what the system is doing and by prompting you to perform certain actions. They also announce alarms, troubles and identify the source of each event.

LCD Display

The display is a single line, backlit 16-character LCD used to display system status and events, time and date, programming instructions and also an event log file which is accompanied by the date and time of each event. The normal display alternates with the time and the system status, for example:

READY HH:MM

↶ (alternating) ↷

READY MEMORY

Screen Saver Mode

For security reasons, it is sometimes required to hide the status indication (LCD and LED display) from a potential intruder. If the Screen Saver option is enabled by the installer, then if no key is pressed for more than 30 seconds, the display will read "PowerMaster-10 / PowerMaster-30" and the LEDs will stop indicating any status. Pressing any key will resume the normal status display. Pressing the Fire or Emergency keys will also initiate the Fire or Emergency alarm.

If configured by the installer for additional security, the system will ask you to enter your user code as well before resuming the normal display.

* Refers to PowerMaster-30 with voice option only

Proximity Tags

Your system responds to valid proximity tags enrolled to the system. The proximity tag enables you to perform a variety of functions without entering user code, for example, arming, disarming, reading the event log, etc. Whenever the user code is required, you can simply present a valid proximity tag and perform the desired operation without the need to key-in your user code.

When the system is disarmed, after presenting a valid proximity tag to the control panel, the message "<OK> for AWAY" is displayed. Now you can press the  button to immediately arm the control panel, or wait for 3 seconds for system automatic AWAY arming (the message "Please exit now" will be displayed). Presenting the proximity tag once again will DISARM the system.

Instead of pressing the  button (see above), you can press the  button once / twice (the message "<OK> for HOME" / "<OK> for disarm" is displayed, accordingly) and then press the  button for HOME arming / disarming.

Users and Codes

As a master User (User No.1) you will need a 4-digit security code to master the system (code 0000 is not allowed). You can also authorize 7 other persons to use the system by providing them with their own security codes (see Chapter 6, C.4 Programming User Codes).

Security codes are used mainly to arm and disarm the system or to access information that is restricted only to authorized users (see Chapter 6, C.4 Programming User Codes).

Moreover, you can obtain up to 8 multi-function portable keyfob transmitters that will allow you and the other users to easily arm, disarm and control the system without accessing the panel, including from outside the premises (see Chapters 2 and 6, C.6 Add / Delete Keyfob Transmitters).

The Duress Code enables you to disarm the system using a special code that sends a silent alarm to the monitoring station (See chapter 2).

OPERATING THE POWERMASTER SYSTEM

2. Operating the PowerMaster System

For more information regarding terms used in this chapter, refer to APPENDIX B. GLOSSARY.

Note: Except for specific reference to PowerMaster-30 functions, the buttons displayed throughout the User's Guide are of the PowerMaster-10 control panel. When using the PowerMaster-30 control panel, these buttons can be interchanged.

Basic Arming and Disarming

Following are a set of procedures for performing basic arming and disarming of the alarm system.

Partition selection process*

Access to any desired partition is achieved through the use of an individual code or proximity tag. It is not possible to access the INSTALLER MENU if one or more partitions are in the AWAY or HOME modes.

Before attempting to perform any operation on any given partition(s), it is necessary to perform the operations below which enable you to select the desired/allowed partition(s) using the individual code or proximity tag:

PRESS	RESULTING DISPLAY
 	SELECT PARTITION
Enter partition # (1 - 3)	PARTITION 1 

Note: The "Sad Tune" will be heard when attempting to select a partition to which no sensors / peripherals were enrolled.

Preparing to Arm

Before arming, make sure that READY is displayed.

READY HH:MM

This means that all zones are secured and you may arm the system any way you choose.

If at least one zone is open (disturbed) the display will read:

NOT READY HH:MM

This means that the system is not ready for arming until all zones are secured (closed).

To review the open zones click  OK. The details and location of the first open zone detector (usually an open door or window sensor) will be displayed.

To fix the open zone, locate the sensor and secure it (close the door or window) – see "device locator" below.

Each click of the  OK button will display another open zone or trouble indication.

Note: To quit at any stage and to revert to the "READY" display, click .

Device Locator: The PowerMaster-10 / PowerMaster-30 system has a powerful device locator that helps you to identify open or troubled devices indicated on the LCD display which operates as follows:

While the LCD displays an open or faulty device, the LED on the respective device flashes indicating "it's me". The "it's me" indication will appear on the device within max. 16 seconds and will last for as long as the LCD displays the device.

It is highly recommended to fix the open zone(s), thus restoring the system to the state of "ready to arm". If you do not know how to do this, consult your installer.

IMPORTANT! All arming procedures below are based on the assumption that quick arming has been enabled by the installer. If quick arming is disabled, the PowerMaster-10 / PowerMaster-30 will prompt you to enter your security code before arming as follows:

* Refers to PowerMaster-30 only

OPERATING THE POWERMASTER SYSTEM

ENTER CODE

Arming 'AWAY'

If the system is **READY** and quick arming is allowed, proceed as shown:

PRESS	RESULTING DISPLAY
	ARMING AWAY
	PLEASE EXIT NOW
Vacate the premises	↓ (Exit delay) ↓
	AWAY

 **ARM indicator** lights steadily during the armed state.

Arming 'HOME'

If all perimeter zones are **READY**, and quick arming is allowed, proceed as shown:

PRESS	RESULTING DISPLAY
	ARMING HOME
Move to interior zone	↓ (Exit delay) ↓
	AWAY HH:MM

 **ARM indicator** flashes during the armed state.

Disarming and Stopping Alarm

Enter the protected premises via a delayed zone. Upon detecting your entrance, the system will start sounding the entry delay beeps alerting you to disarm the system before the entry delay ends. To disarm the system proceeds as shown:

PRESS	RESULTING DISPLAY
	CODE <input type="text"/>
[Enter Code]	Code
	READY HH:MM

 **ARM indicator** extinguishes during the disarmed state.

Disarming the system also stops the siren alarm, irrespective of whether the alarm was initiated during the armed or the disarmed state.

Disarming after an Alarm or Trouble

After disarming, different displays may appear indicating that the system is in a state of **TROUBLE (TRBL)** or alarm **MEMORY** and will also sound trouble beeps  once per minute. To find out the troubles that have been detected, or which zone alarmed, see Chapter 5. Reviewing Troubles and Alarm memory.

Upon eliminating the cause for trouble the **TRBL** display will disappear, the **TROUBLE** indicator will extinguish and the trouble beeps will stop.

The **MEMORY** message will disappear only upon rearming the system.

IMPORTANT! If the trouble beeps bother you, disarm the system again (even though it is already disarmed). This will cancel the trouble beeps for 4 hours.

OPERATING THE POWERMASTER SYSTEM

Special Arming & Disarming Options

In addition to basic arming, PowerMaster-10 / PowerMaster-30 provides you with several advanced arming and disarming options:

Switching from 'HOME' to 'AWAY'

Do not disarm the system - just press . The response will be the same as in ARMING AWAY above. Vacate the premises before the exit delay expires.

Switching from 'AWAY' to 'HOME'

Do not disarm the system - simply press . Since this operation reduces the security level, the PowerMaster-10 / PowerMaster-30 will ask you to key in your master user code or user code, thus making sure that you are an authorized user.

PRESS	RESULTING DISPLAY
 [Enter code]	ENTER CODE  Code
Move to interior zone	ARMING HOME ↓ (Exit delay) ↓
	ARM HOME HH:MM

 **ARM indicator** flashes during the armed state.

Arming AWAY or HOME 'Instant'

Pressing the   button during the exit delay will arm the system in the "Instant" mode, i.e. without an entry delay. Therefore, any detection in any zone will trigger an immediate alarm.

If you wish to arm AWAY-INSTANT, proceed as follows.

PRESS	RESULTING DISPLAY
	ENTER CODE  Code
	ARMING AWAY
 	ARMING INSTANT ↻ (alternating) ↻
Vacate the premises	PLEASE EXIT NOW ↓ (Exit delay) ↓
	AWAY

 **ARM indicator** lights during the armed state.

Forced Arming AWAY or HOME

Forced arming allows you to arm the system even if one or more zones are disturbed and the "NOT READY" message is displayed.

Automatic forced arming operates only if this option was enabled by the installer while programming your system. All disturbed zones will be automatically bypassed - they will not be armed. **The protected site will not have maximum protection.**

OPERATING THE POWERMASTER SYSTEM

Note: When forced arming is carried out, the buzzer “protests” by emitting a continuous tone during the exit delay until the last 10 seconds of the delay. You can silence this signal by pressing the arming button again.

If forced arming is enabled and you wish to arm the system when NOT READY is displayed, proceed as shown:

PRESS	RESULTING DISPLAY
 [Enter code]	ENTER CODE <input type="text"/> Code
	ARMING AWAY
 (to mute the buzzer) Vacate the premises	PLEASE EXIT NOW ↓ (Exit delay) ↓
	AWAY

 **ARM indicator** lights during the armed state.

Remember: Forced arming compromises security!!

Forced arming “HOME” is performed in a similar manner, as follows:

PRESS	RESULTING DISPLAY
 [Enter code]	ENTER CODE <input type="text"/> Code
	ARMING HOME
 (to mute the buzzer) Go to interior zone	PLEASE EXIT NOW ↓ (Exit delay) ↓
	HOME HH:MM

 **ARM indicator** flashes during the armed state.

Arming in the Latchkey Mode

This mode, if enabled by the installer, is useful for a parent at work who wants to be sure that his children have returned from school and have disarmed the system. A special “latchkey” message will be sent out when the system is disarmed by a “latchkey user”.

Latchkey users are holders of user codes 5 through 8 (PowerMaster-10) / user codes 23-32 (PowerMaster-30) or users of Keyfob transmitters 5 through 8 (PowerMaster-10) / 23-32 (PowerMaster-30). The latchkey message is considered an alert and not an alarm, and is therefore sent to the private telephones programmed by the user as targets for alert messages.

Latchkey arming is possible only when you arm “AWAY”. To arm in the Latchkey mode, proceed as follows:

PRESS	RESULTING DISPLAY
	ARMING AWAY
 (Within 2 seconds)	ARMING LATCHKEY ↶ (alternating) ↷
Vacate the premises	PLEASE EXIT NOW ↓ (Exit delay) ↓
	AWAY

OPERATING THE POWERMASTER SYSTEM

Note: Latchkey must be enabled by your installer.

 **ARM indicator** lights during the armed state.

Disarming under Duress.

If you are forcibly compelled to disarm the system, enter the duress code (2580 by default) or another code set by the installer. Disarming will take place normally but a silent alarm will be transmitted to the monitoring station.

Using Keyfob Transmitters

Using portable keyfobs (KF-234 PG2) you can also conveniently arm and disarm the system from outside the premises, initiate "panic alarms" and even use it as a remote control.- see figure 2.

The KF-234 PG2 commands are authenticated and encrypted using high security AES - 128 encryption standard, hence malicious "code grabbing" is virtually impossible.

Arming & disarming with Keyfobs:

To arm or disarm the system press the respective key (see Figure 2). The keyfob will confirm with a red LED blink and buzzer beep and will transmit your request to the panel.

-  ARM AWAY
-  ARM HOME
-  DISARM
-  AUX

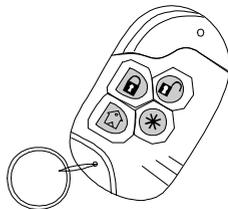

Figure 2. KF-234 PG2 Keyfob Transmitter

If the operation is successfully completed, the green LED lights momentarily and a "happy tune" is heard. If the operation cannot be completed, for example, when the system is "not ready", the red LED lights steadily and a "sad tune" is heard.

Arming in Latchkey mode (*):

Pressing AWAY twice within 2 seconds initiates Latchkey arming, if enabled by the installer.

Using the AUX key (*):

The AUX (*) key on the KF-234 PG2 keyfob can be configured by the installer to provide you with any of the following options:

- A. Arming the system in the INSTANT mode (*):** This is the default option. Pressing the AUX (*) button immediately after arming, during exit delay, will arm the system in "instant" mode. This means cancelling the entry delay causing the system to trigger an immediate alarm upon entering the protected premises via any zone. To prevent false alarms, you, and other keyfob holders, must disarm the system by pressing the DISARM (🔓) button on your keyfobs before entering the protected premises.
- B. Not used:** No function is assigned to the AUX (*) button
- C. Stop Beeps:** Pressing the AUX (*) button will cause the control panel and other devices in the system (such as keyfobs, keypads, sirens etc.) to stop beeping (for example during exit or entry delays).
- D. Skip exit delay:** Pressing the AUX (*) button during the exit delay will immediately stop the exit delay beeps.
- E. Controlling a gate or another electrical device (PGM):** Pressing the AUX (*) button opens/closes an electrically-controlled gate, or controls a chosen electrical device via PGM output of the system.

(*) For further information - see Appendix B.

Initiating Alarms

Following are various methods that may be used for initiating alarms.

Initiating Panic Alarm with Keyfobs

Using the KF-234 PG2 you can initiate a PANIC alarm by pressing both AWAY  and HOME  keys simultaneously for 2 seconds.

Low Battery Indication

If the battery power is near the end of its life, the keyfob LED indicates this by flashing the yellow light at the end of keyfob activation. It will also send a "low battery" signal to the panel which will be indicated on the LCD display as a trouble message (see Chapter 5. Reviewing Troubles and Alarm memory). When "low battery" occurs, you must replace the battery within 2-3 weeks otherwise your keyfob will stop functioning.

Acknowledging "low battery" condition

Some regulations and institutions require the user to acknowledge when the keyfob enters the "low battery" condition. The acknowledge procedure is described in Chapter 6.

Initiating Panic Alarm

You can generate a panic alarm manually in the disarmed and armed states alike. The sequence will be as shown:

PRESS	RESULTING DISPLAY
 simultaneously	<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 0 auto;">PANIC ALARM</div> <div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 10px auto;">READY HH:MM</div>

To stop the alarm, press the  button and then key in your valid user code.

Initiating Fire Alarm

(This function is disabled in ACPO compliant version).

You can generate a fire alarm in disarmed & armed states, as follows:

PRESS	RESULTING DISPLAY
 for 2 seconds	<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 0 auto;">FIRE ALARM</div> <p style="margin: 5px 0;">Then, if or when the system is in the disarmed</p> <div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 0 auto;">READY HH:MM</div> <p style="margin: 5px 0;"> (alternating) </p> <div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 0 auto;">READY MEMORY</div>

To stop the alarm, press  and then key in your valid user code.

OPERATING THE POWERMASTER SYSTEM

Initiating Emergency Alarm

You can generate a silent emergency alarm manually in the disarmed and armed states, as follows:

PRESS	RESULTING DISPLAY
 for 2 seconds	EMERGENCY Then, if or when the system is in the disarmed
	READY HH:MM
	(alternating)
	READY MEMORY

Siren Alarms

The maximum operating time of the siren is configured by the installer according to local regulations.

Continuously ON when initiated by a burglar zone or a 24-hour zone, and when a user initiates a “panic alarm”. When initiated by a fire zone (smoke is detected) **ON - ON - ON - pause - ON - ON - ON - pause -** and so on.

If there is nobody around to disarm the system upon alarm, the siren will sound for the time duration set by the installer - then will stop. If enabled, the strobe light will keep flashing until the system is disarmed or the siren will stop as configured by the installer.

Chime ON/OFF

You can disable / enable the chime zones (see Appendix B) by alternate clicking of the  key, as shown below:

PRESS	RESULTING DISPLAY
	CHIME ON
	CHIME OFF
	↓
	READY HH:MM

 CHIME indicator lights steadily when “chime on” is selected.

Adjusting the Volume of the Beeps

You can control the volume level of the sounded beeps by using the  and  keys on the keypad. The following diagram shows how to increase the loudness of the beeps by clicking the <1> key (assuming that the volume was at minimum to begin with).

PRESS	RESULTING DISPLAY
	VOLUME+ 
	VOLUME+ 
	VOLUME+ 
 (max)	VOLUME+ 

OPERATING THE POWERMASTER SYSTEM

The following diagram shows how to decrease the loudness of the beeps with the <4> key (assuming that the volume was at maximum to begin with).

<u>PRESS</u>	<u>RESULTING DISPLAY</u>
4 (max)	VOLUME- ■ ■ ■ ■
4	VOLUME- ■ ■ ■
4	VOLUME- ■ ■
4	VOLUME- ■

3. Speech And Sound Control*

Speech & Sound Cont. Push-buttons

The sound and speech-related functions offered by the control panel are controlled with the keypad, as detailed in the following list.

When partitioning is enabled:

Sound and speech-related features only apply to the partition(s) where the control panel is present. An activity performed via the control panel from another partition will be displayed and the LED will light. The operation will be added to the log file but will not be heard over the control panel speaker.

<u>Key</u>	<u>Function</u>
1 	Increases the loudness of spoken messages
4 	Decreases the loudness of spoken messages
7 	Enables / disables the loudspeaker
2 	Records a spoken message for other users of the alarm system
5 	Allows listening to a recorded message left by another user of the alarm system
8 	Enables / disables the chime function in chime zones

Adjusting the Speech Volume

The following diagram shows how to increase the loudness by clicking the <1> key (assuming that the volume was at minimum to begin with).

<u>PRESS</u>	<u>RESULTING DISPLAY</u>
1 	VOLUME+ █
1 	VOLUME+ █ █
1 	VOLUME+ █ █ █
1  (max)	VOLUME+ █ █ █ █

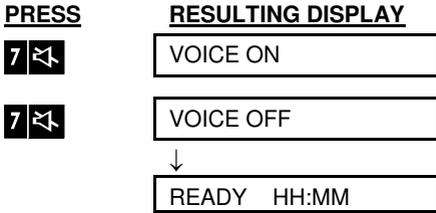

The following diagram shows how to decrease the loudness with the <4> key (assuming that the volume was at maximum to begin with).

<u>PRESS</u>	<u>RESULTING DISPLAY</u>
4  (max)	VOLUME- █ █ █ █
4 	VOLUME- █ █ █
4 	VOLUME- █ █
4 	VOLUME- █

* Refers to PowerMaster-30 with voice option only

Voice ON/OFF

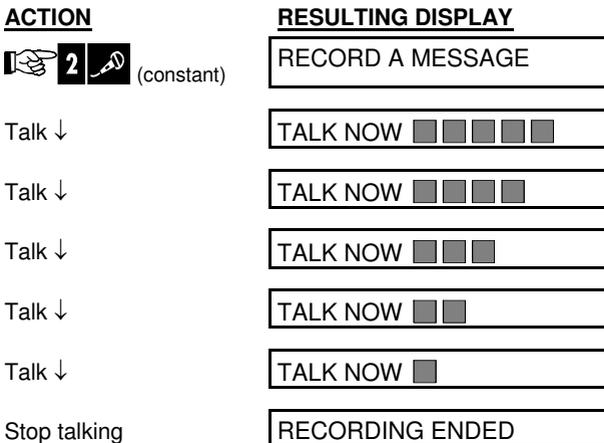

You can switch spoken announcements on and off by alternate clicking of the <7> key, as shown below.

Note: The system will maintain the “Voice OFF” state until subsequent selection of “Voice ON”.

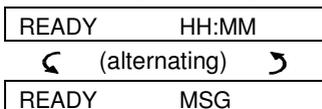

Message Exchange

For message exchange you can record a verbal message for other users of the alarm system. Face the panel, press <2> and keep it pressed. When the display reads **TALK NOW**, start talking. The 5 dark boxes will slowly disappear one by one, from right to left, as shown in the diagram below.

Once the last of the boxes disappears, **RECORDING ENDED** will be displayed.

When you release the button, the display will revert to the normal status-displaying mode, but will also indicate that a message is waiting. For example:

To check your own message, listen to it within one minute from the end of recording (see the next section - Message Playback). This way the **MSG** indication will not be erased.

Message Playback

To listen to a message left by another user of the system:

Click and listen. **PLAY** will be displayed and the message will be played back over the built-in loudspeaker. When the playback ends, the display will revert to the normal status-displaying mode. If more than 1 minute elapsed after recording, the **MSG** indication will disappear.

4. Electrical Appliance Control

Control Options and Pushbuttons

The system allows manual or automatic remote control of a device connected to the PGM output.

The user defines the ON and OFF times via the Scheduler (see Chapter 6 - C.13 Programming the Scheduler).

The installer determines which zone sensors will switch the remote controlled appliances on and off. **However, the decision whether the remote controlled appliance will respond as programmed is up to you** (see next table).

Key	Function
-----	----------

3	Manual activation of a light or other household electrical appliance that is connected to PGM output.
6	Manual deactivation of a light or other household electrical appliance that is connected to PGM output.
9	Selecting the active automatic control method: <ul style="list-style-type: none">■ Sensors: The appliance is controlled by sensors (assigned by the installer for this).■ Timer: The appliance is controlled by timer (ON and OFF times are defined by the installer).■ Both: The appliance is controlled by sensors as well as by a timer.

Examples of benefits gained by automatic remote control:

- **Timer Control.** When you are away, the timed activation / de-activation of an electrical appliance.
- **Zone Control.** Upon disturbance of a perimeter zone, the electrical device is switched on.

Note: Automatic activation and deactivation of electrical appliance depends also on the Scheduler setup (see Chapter 6 - C.13 Programming the Scheduler).

Automatic ON/OFF Control

You can select two of four options:

- By Timer ON
- By timer OFF
- By sensor ON
- By sensor OFF

The presently active options are shown with a dark box (■) at the far right. To view the 2 other options click the 9 button.

A presently inactive option is shown without a dark box at the far right. The dark box will appear if you click **! OK** while the option is displayed. A "Happy Tune" indicates successful saving of a new option.

PRESS

READY HH:MM

5. Reviewing Troubles and Alarm memory

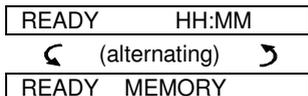

Alarm & Tamper Memory Indication

The PowerMaster-10 / PowerMaster-30 retains in its memory alarm and “tamper” events that occurred during the last arming period.

Note: Alarm events are memorized only after the “abort period” (see Appendix B). This means that if you disarm the system immediately - before the abort period expires - there will be no memory indication

A. Indication of Alarm & Tamper Condition

If the system is disarmed following an alarm event, a flashing **MEMORY** message will be displayed, as follows:

B. Displaying Alarm & Tamper Information

To review memory content, click **! OK** button.

EXAMPLE: An alarm was triggered because the garage door - zone No. 12 – was opened **but then closed**. In addition, the bedroom motion detector - zone No. 7 - sent a “Tamper” message because its cover had been removed.

PRESS	RESULTING DISPLAY
! OK	POWERMMASTER-10*
! OK	Z12 ALARMED ↩ (alternating) ↪ Z03 CONTACT ↩ (alternating) ↪ GARAGE DOOR
! OK	Z07 TAMPER-OPEN ↩ (alternating) ↪ Z06 MOTION SENS ↩ (alternating) ↪ BEDROOM ↓ READY HH:MM

In response to additional clicking of the **! OK** button, the display shows details of other events retained in open tamper (if any), or reverts to its initial state (see A above).

If the system is NOT READY, the display will first read the open zones and then alarm memory events.

* When working from the PowerMaster-30 control panel, the display will read "PowerMaster-30"

REVIEWING TROUBLES AND ALARM MEMORY

Clearing the Memory Indication

To clear the 'Memory' indication you must first review the cause of alarm as described above. Once you return to the 'Ready' screen simply press Away  and enter the code if requested, then press Disarm  followed by the code. The memory message will now clear. Otherwise the memory indication and content will be cleared upon the next arming of the system.

Troubles

A. Indication of Trouble condition

If the system detected a trouble condition in any of the enrolled devices, the TROUBLE indicator illuminates, 3 beeps are sounded once per minute and a flashing **TRBL** message is displayed, as follows.

READY HH:MM
⏪ (alternating) ⏩

READY TRBL

or, if the system is not ready for arming -

NOT READY HH:MM
⏪ (alternating) ⏩

NOT READY TRBL

B. Displaying Trouble Information

All trouble messages need to be reviewed and corrected as described below:

EXAMPLE: The kitchen device - zone No. 9 - has reported a low battery – the living room device zone No. 15 - has been inactive, and an attempt to communicate a message to your telephone has failed. However, these troubles do not prevent the system from being "ready to arm".

To review the source of the current troubles one by one, click the  button repeatedly as shown below:

PRESS	RESULTING DISPLAY
	POWERMASTER-10*
	Z09 LOW BATTERY ⏪ (alternating) ⏩ Z09 CONTACT ⏪ (alternating) ⏩ KITCHEN ↓
	Z15 MISSING ⏪ (alternating) ⏩ Z15 MOTION SENS. ⏪ (alternating) ⏩ LIVING ROOM ↓
	COMM. FAILURE ↓ READY HH:MM

* When working from the PowerMaster-30 control panel, the display will read "PowerMaster-30".

REVIEWING TROUBLES AND ALARM MEMORY

IMPORTANT! If the trouble beeps bother you, disarm the system again (even though it is already disarmed). This will cancel the trouble beeps for 4 hours.

C. Reviewing Memory & Troubles at the Same Time

If **alarms / tamper events** are retained in the alarm memory and at the same time a state of **trouble** exists, the display will first read the alarm memory followed by trouble events, as described in sections A & B above.

General Indications

After all trouble messages have been reviewed and if a SIM card is installed in the control panel, the PowerMaster-10/PowerMaster-30 displays the GSM signal strength indication, as follows: "GSM RSSI STRONG" / "GSM RSSI GOOD" / "GSM RSSI POOR".

If a PIR camera is enrolled in the system, the control panel will read "GPRS initialize" to indicate that the modem is undergoing initialization. This message appears at the end of all trouble messages and immediately following the GSM signal strength indication (if a SIM card is installed).

Correcting Trouble Situations

The trouble indications (illuminated TROUBLE indicator and flashing TRBL message) are cleared once you eliminate the cause of trouble. The table below describes the system faults and respective corrective actions. **If you do not know how to correct a trouble situation, report it to your installer and seek his advice.**

Fault	What it means
1-WAY	The device functions but cannot "hear" the panel. The control panel cannot configure or control the device. Battery consumption increases.
AC FAILURE	There is no power supplied to the device.
CLEAN ME	The fire detector must be cleaned
COMM. FAILURE	A message could not be sent to the monitoring station or to a private telephone (or a message was sent but was not acknowledged)
CPU LOW BATTERY	The backup battery within the control panel is weak and must be replaced (see Chapter 10. Maintenance, "Replacing Backup Battery").
CPU TAMPER	The control panel was physically tampered with or its cover was opened, or it was removed from wall.
FUSE TROUBLE	The PGM fuse is burnt out or overloaded.
GAS TROUBLE	Gas detector failure
GSM NET FAIL	The GSM communicator is not able to connect to the cellular network.
JAMMING	A radio-frequency signal which is blocking all communication frequency channels between the sensors and control panel is detected.
LOW BATTERY	The battery of the indicated device is near the end of its useful life.
MISSING	A device or detector has not reported for some time to the control panel.
NOT NETWORKED	A device was not installed or not installed correctly, or, cannot establish communication with the control panel after installation.
RSSI LOW	The GSM communicator has detected that GSM network signal is weak
SIREN AC FAILURE	There is no power to the siren
LINE FAILURE	There is a problem with the telephone line

6. Menus and Functions

This chapter explains the user programming features of your PowerMaster-10 / PowerMaster-30 system and allows you to tailor the PowerMaster-10 / PowerMaster-30 system according to your specific needs. The chapter is divided into three sections, as follows:

Part A – Provides you with a general description of available User Setting options.

Part B – Guides you how to enter/exit the User Settings menu and how to select the desired setting options.

Part C – Guides you to execute the selected settings.

A The Settings You Need

The installer provides you with a ready-to-use alarm system, but a number of settings may still be needed. The User Settings menu provides you with essential options that allow you to adapt the system to your specific needs, to operate it as you desire and to upgrade it when necessary.

Below is a list of the User Settings menu options. A more detailed list is provided in section B.1. Detailed setting instructions for options 1 to 14 are provided in sections C.1 to C.14.

1. Setting the zone bypass scheme(*)
2. Reviewing the zone bypass scheme(*)
3. Recalling the zone bypass scheme(*)
4. Programming user codes(**)
5. Add / delete proximity tags (**)
6. Add / delete keyfob transmitters (**)
7. Setting the time & time format(**)
8. Setting the date & date format(**)
9. Enabling / disabling auto-arming(**)
10. Setting the auto-arming time(**)
11. Programming private phone numbers(**)
12. Enabling / disabling the squawk option(**)
13. Programming the scheduler(**)
14. Enabling / disabling the voice option(**)

* These menu options are available only if the bypass option was enabled by the installer.

** This option can be accessed only by the master user using the master user code.

Note 1: *Although the user settings are your responsibility, you may request your installer to perform them for you (except for the user codes which you desire to keep secret).*

Note 2: *Some options may not be available on your PowerMaster-10 / PowerMaster-30 system.*

MENUS AND FUNCTIONS

B.1 Entering the User Settings Menu & Selecting a Setting Option

The following procedure describes how to enter and move within the User Settings menu. Detailed descriptions of the User Setting options are provided at the end of the procedure. To exit the User Settings menu – see section B.2.

1. You can enter the "User Settings" menu only when the system is disarmed.
2. Carefully read the section titled "Additional Information" according to the indicated references ¹ etc – see table at end of this section.

Note: Except for specific reference to PowerMaster-30 functions, the buttons displayed throughout the User's Guide are of the PowerMaster-10 control panel. When using the PowerMaster-30 control panel, these buttons can be interchanged.

A. To Enter the User Settings Menu

1.  Make sure the system is disarmed and then press the  button repeatedly until the display reads "USER SETTINGS". ¹
2.  Press  to confirm.
 The screen will now prompt you to enter your user code.
3.  Enter your User Code. ²
 The display reads the first Setting option of the User Settings menu [SET BYPASS]. ³

B. To Select a Setting Option

4.  Click the  or  button until the display reads the desired setting option, for example, "TIME & FORMAT".
5.  When the desired setting option appears on the display, press the  button to enter the setting process.

Continue to the selected setting option in C.1 - C.14

The remainder of the procedures for the selected setting options is provided in sections C.1 to C.14.

Additional Information (section B.1)

¹	<i>Display shown in disarm state when all zones are secured (00:00 or other digits show present time).</i>
²	<i>a. If you have not already changed your personal code number, use the default setting – 1111. b. The Master User has access to all User Settings options. All other users have access only to the Bypass options. c. Do not set any user code the same as an installer code.</i>
³	<i>The bypass options will be displayed in the User Settings menu only if enabled by the installer. Otherwise, the first user setting option displayed will be [USER CODES].</i>

C. User Setting Options Menu

Click the  button until the display reads the desired setting option and then press the  button.

SET ZONE BYPASS

Use to set the Zone Bypass Scheme i.e. to bypass (exclude) faulty or unsecured ("disturbed") zones, or to clear a bypassed zone (unbypass). For further details and programming procedure **see section C.1.**³

REVIEW BYPASS

Use to quickly review the Bypass Scheme i.e. which zones are bypassed. For further details and reviewing procedure **see section C.2.**³

RECALL BYPASS

Use to Recall the last used bypassed scheme for reuse in next arming period. For further details and recalling procedure **see section C.3.**³

USER CODES

Use to program your Master User secret access code and the seven codes of the other users. For further details and programming procedure **see section C.4.**

PROXIMITY TAGS

Use to add new Proximity Tags to or to delete Proximity Tags when lost. For further details and programming procedure **see section C.5.**

KEYFOBS

Use to add new Keyfob Transmitters or to delete Keyfob Transmitters when lost. For further details and programming procedure **see section C.6.**

TIME & FORMAT

Use to set the time clock to show the correct time and time format. For further details and programming procedure **see section C.7.**

DATE & FORMAT

Use to set the calendar date to show the correct date and date format. For further details and programming procedure **see section C.8.**

AUTO-ARM ENABLE

Use to enable or disable the Automatic Daily Arming option at predefined times (see Auto-Arm Time setting). For further details and programming procedure **see section C.9.**

AUTO-ARM TIME

Use to set the predetermined time for the Automatic Daily Arming if enabled (see Auto-Arm Enable setting). For further details and programming procedure **see section C.10.**

PRIVATE REPORT

Use to program the four private telephone numbers for reporting alarm and other event messages to private subscribers. For further details and programming procedure **see section C.11.**

SQUAWK

Use to enable or disable the squawk sound i.e. arm / disarm feedback indication. For further details and programming procedure **see section C.12.**

SCHEDULER

Use to set the daily / weekly time schedule for start & stop activation of devices connected to the PGM output. For further details and programming procedure **see section C.13.**

VOICE OPTION

Use to enable or disable the voice option i.e. the voice prompts that are heard over the built-in loudspeaker. For further details and programming procedure **see section C.14.**

<OK> TO EXIT

Returns to first option

Use to exit from the "USER SETTINGS" menu back to Main Menu. For further details **see section B.3.**

MENUS AND FUNCTIONS

B.2 Returning to the Previous Step or Exiting the USER SETTINGS Menu

During the setting process it is frequently necessary to return to the previous setting step or option (i.e. "to go one level up") or to exit the User Settings menu.

A. To Move One Level Up

To move one level up during the setting process, click the  button once or more. Each click will take you one level up or to the previous setting step:

B. To Exit the USER SETTINGS Menu

Any screen

To exit "USER SETTINGS", move up the menu by pressing the  button repeatedly (see above) until the display reads [⟨OK⟩ TO EXIT] or preferably; press the  button once which brings you immediately to the exit screen [⟨OK⟩ TO EXIT].

⟨OK⟩ TO EXIT

When the display reads [⟨OK⟩ TO EXIT], press 

READY 12:00

The system exits the "USER SETTINGS" menu and returns to the normal disarm state while showing the READY display.

B.3 Buttons used for Navigation & Setting

The keypad's buttons are used for various functions when programming. The following table provides a detailed description of the function or use of each button.

Button	Definition	Navigation / Setting Function
	NEXT	Use to move / scroll forward to the next menu options.
	BACK	Use to move / scroll backward to the previous menu options.
	OK	Use to select a menu option or to confirm a setting or action .
	HOME	Use to move one level up in the menu or to return to previous setting step .
	AWAY	Use to jump back to the [⟨OK⟩ TO EXIT] screen to quit programming.
	OFF	Use to cancel, delete, clear or erase setting, data, etc.
0 - 9		Numerical keypad used to enter numerical data.

C.1 Setting the Zone Bypass Scheme

Bypassing permits arming only part of the system while allowing free movement of people within certain zones when the system is armed.

It is also used to temporarily remove from service faulty zones that require repair work or to deactivate a sensor if, for example, you are decorating a room.

- ◆ Here you can set the Zone Bypass Scheme i.e. to scroll through the list of registered (enrolled) sensors to your PowerMaster-10 / PowerMaster-30 system and to Bypass (deactivate) faulty or disturbed sensors (either READY or NOT-READY) or to Clear (reactivate) BYPASSED zones (sensors).

Once you have set a Bypass Scheme you can use the following 3 options:

- > To quickly review the bypassed zones – refer to section C.2.
- > To quickly clear a bypassed zone i.e. to reactivate the bypassed zone – refer to section C.2.
- > To repeat (recall) the last used zone bypassing scheme – refer to section C.3.

- ①
1. Zones will be bypassed throughout one disarm-arm period only. Disarming the system after arming will suspend the entire bypassing scheme but you can recall and reuse it as described in section C.3.
 2. Fire zones cannot be bypassed.
 3. Carefully read the section titled "Additional Information" according to the indicated references ¹ etc – see table at end of section C.3.

REMEMBER – ZONE BYPASSING COMPROMISES SECURITY!

A. To Bypass a Zone

1.  Enter the USER SETTINGS menu and select the [SET ZONE BYPASS] option and press the  button to confirm. ¹

2.  The first zone, Z01, is displayed. ²

Click the  or  button until the display reads the zone you wish to bypass (or clear bypass), for example, "Z04" for Zone 04. After several seconds the LED on the respective device starts flashing indicating "it's me".
3.  When the display reads the zone you wish to bypass press  to confirm.

4.  The display now reads [OK TO BYPASS]. ³

To bypass the selected zone press 
5.  A "Happy Tune" 🎵 🎶 sounds and the updated zone status is now displayed i.e. [Z04: BYPASSED]. ⁵

MENUS AND FUNCTIONS

B. To Clear a Bypassed Zone

-  Repeat steps 1 to 2 above.
-  When the zone you wish to clear bypass appears on the display (for example, "Z04"), press **I OK** to confirm. You can also identify the device by looking for the "it's me" LED indication on the displayed device.
 The display now reads [**<OFF> TO CLEAR**].³
-  To clear the bypassed zone press the **I OK** button.
 A "Happy Tune" 🎵🎶 sounds and the updated zone status is now displayed, i.e. [Z04: READY] or [Z04: NOT READY].⁶

C.2 Reviewing the Zone Bypass Scheme

- ◆ Here you can quickly review the Bypass Scheme i.e. the zones that are set to be bypassed during the next arming session.

-  Enter the USER SETTINGS menu and select the [REVIEW BYPASS] option and press the **I OK** button to confirm.¹
-  The display reads [BYPASS LIST]
Click the **▶▶** or **◀◀** buttons repeatedly to review all bypassed zones in ascending numerical order. When done, click the **⬆️** button to exit.⁶
- 

C.3 Recalling the Zone Bypass Scheme

- ◆ Use this option to repeat (recall) the most recent Bypassed Scheme for use during the next arming session.

-  Enter the USER SETTINGS menu, select the [RECALL BYPASS] option and press the **I OK** button to confirm.¹
-  The display now reads [**<OK> TO RECALL**].⁴
To recall the last used bypass scheme press **I OK**.⁵
-  A "Happy Tune" 🎵🎶 sounds. The display reads [BYPASS RECALLED] and then returns to "USER SETTINGS" step 1.⁶

<i>Additional Information (section C.1 – C.3)</i>	
1	For detailed instructions on how to select User Settings – refer to section B.1 and section B.2.
2	<p>a. The STATUS to the right of the zone number indicates whether the zone is READY, NOT-READY or BYPASSED.</p> <p>b. In the example on the left the display reads [Z01# READY] alternating with [Living Room].</p>
3	<p>a. If the zone you selected is "not bypassed", the display prompts you to press [⟨OK⟩ TO BYPASS]. However, if the zone you selected is already "bypassed", the display prompts you to press [⟨OFF⟩ TO CLEAR].</p> <p>b. To abort and return to the previous step press  or .</p>
4	The display now prompts you to press [⟨OK⟩ TO RECALL] i.e. to repeat the last used bypass scheme. If you wish to abort and return to the User Setting menu, press  .
5	You can now repeat steps 2 - 5 to bypass or clear another zone. To end this session and to select other menu options or to quit programming - follow the instructions in section B.2.
6	You can now select another option in the User Setting menu (see section B.1), or quit programming (see section B.2).

MENUS AND FUNCTIONS

C.4 Programming User Codes

The PowerMaster-10 / PowerMaster-30 system allows you to authorize up to 8 people (in PowerMaster-10 system) / 48 people (in PowerMaster-30 system) to arm and disarm the system by providing each with a unique 4 digit personal security code, and assigning them with different security levels and functionalities. There are two types of users: Master User and User, The table below summarizes the different operations that can be performed by different users:

User type	Function
Master User	Arm/disarm
	Zone bypass
	Authorize 7 other user codes
	Set user codes
	Report to private
	Enroll/delete keyfob
	Automatic arming
	Enable squawk
	Set date and time format
	Read event log
User	Arm/disarm
	Zone bypass options

The user codes are assigned as follows:

User Code 1 is assigned to the Master User of the system (i.e. the owner). It is the only user code that allows access to the User Setting menu. The default setting of the Master User code 1 is 1111. This code cannot be erased and must be replaced with a secret code as soon as possible.

User Codes 2-4 (PowerMaster-10) / User Codes 2-22 (PowerMaster-30) are assigned to family members, co-workers etc. They enable arming and disarming of the system or of selected partitions as defined by the Master User. They can access the "User Setting" menu only for "zone bypassing" provided this option is enabled in the Installer menu.

User Codes 5-8 (PowerMaster-10) / User Codes 23-32 (PowerMaster-30) are the same as user codes 2-4 / 2-22 but can be assigned to "Latchkey" (child monitor) users. For a detailed explanation of the Latchkey application see Chapter 2 (Arming in the Latchkey Mode) and Appendix B.

Partition Option (For information about Partition option - see Appendix A) – not applicable to PowerMaster-10
Your PowerMaster-30 system can divide zones into up to 3 parts (groups) via the installer menu. These parts are designated as partitions P1, P2 & P3. Each partition can be armed and disarmed separately providing protection to selected parts of the premises.

Each user out of the 48 system users can be authorized by the Master User to arm and disarm any combination of partitions including all 3 partitions.

◆ Here you can program (or edit) the 48 User Codes and thereby define which of these will be authorized to arm and disarm.

- ①
1. The default setting 1111 of Master User Code 1 is the same for all PowerMaster-10 / PowerMaster-30 systems and is known to many other people. Therefore, we highly recommend that you immediately replace it with a unique secret code. **Never set any user code the same as any installer code.**
 2. Code "0000" is not valid! Do not use it.
 3. The duress code (2580 by default), which is set in the installer menu, cannot be selected as a normal user code. Any attempt to program it will be rejected by the system.
 4. Carefully read the section titled "Additional Information" according to the indicated references ¹ etc – see table at end of this section.

A. To Program a User Code

1.  Enter the USER SETTINGS menu, select the [USER CODES] option and press the  button to confirm. ¹

2.  The first user code "User 01 Code" is displayed. ²
 or 
 At the blinking cursor position, key in the User Code you wish to program , for example, [2+6] for user code 26, or alternatively click the  or  button until the display reads, "User 26 Code".

3.  When the user code you wish to program appears on the display, press  to confirm.

4.  To program or edit the code, at the blinking cursor position enter the 4 digit code, for example, "1234", using the numerical keypad. ^{3, 4}

5.  When done, press  to confirm.

 Return to step 3

A "Happy Tune"  sounds. The display confirms the saved code. ^{5, 6}

B. To Set Partitions Authorization*

6.  The display will read [SET PARTITIONS]. ⁷

7.  Use the keypad keys , ,  to change the status of the partitions P1, P2 & P3, respectively. ⁸

 When you are satisfied with the setting, for example, User 4 is authorized with Partition 1 and 3 only, press  to confirm.

 Return to step 3

A "Happy Tune"  sounds. The display confirms the Partition setting. ⁹

* Refers to PowerMaster-30 only

MENUS AND FUNCTIONS

<i>Additional Information (section C.4)</i>	
1	<i>For detailed instructions on how to select the setting options – refer to section B.1 and section B.2.</i>
2	<i>The display shows the 1st User Code (Master User) in the list of 8 User Codes (in PowerMaster-10 system) / 48 User Codes (in PowerMaster-30). If you have not yet changed the default code 1111, we recommend that you change it now.</i>
3	<ul style="list-style-type: none"> a. <i>The display shows the user code currently programmed in this location (e.g. 5327).</i> b. <i>The cursor blinks on the first digit of the code.</i> c. <i>If the location is free the display will be blank (- - -).</i>
4	<i>You can move the cursor to the next or previous digit using the ( / ) buttons. Pressing the  button erases the digit of the cursor + all digits right of the cursor.</i>
5	<ul style="list-style-type: none"> a. <i>The new code is momentarily displayed without the cursor before reverting to step 3.</i> b. <i>If Partition is enabled, continue to step 6.</i>
6	<i>You can now repeat steps 3 - 5 to program or edit another user code. To end this session and to select other menu options or to quit programming – follow the instructions in section B.2.</i>
7	<i>This setting can be performed only after completing steps 1 - 5 of section C.4A.</i>
8	<i>The  symbol now appears next to the newly selected Partitions.</i>
9	<i>You can now repeat steps 3 - 7 to program or edit another user code.</i>

C.5 Add / Delete Proximity Tags

Each of the 8 PowerMaster-10 / PowerMaster-30 users may be provided with a proximity tag that can be used instead of the user codes to perform a variety of functions, for example, arming, disarming, reading the event log, etc.

Whenever a user code is required you can simply present a valid proximity tag instead of entering the user code. Each tag should be assigned with a serial No. 1-8 (PowerMaster-10) / 1-32 (PowerMaster-30) that corresponds to the User Code No. 1-8 (PowerMaster-10) / 1-32 (PowerMaster-30) and enrolled into the system correspondingly.

The partition* authorization of the tags is identical to their corresponding user codes. For example, proximity tag 3 is assigned to user code 3.

◆ Here you can add (enroll) new proximity tags or delete tags as required.

ⓘ Carefully read the section titled "Additional Information" according to the indicated references¹ etc – see table at end of this section.

A. To Add (Enroll) a Proximity Tag

1.  Enter the USER SETTINGS menu, select the [PROXIMITY TAGS] option and press the  button to confirm. ¹

2.  The display will read [ADD NEW TAG]. ³
To begin the process of enrolling a new proximity tag press .

3. 

 Present the proximity tag to the control panel within the timeout period.

4.  If enrollment was successfully completed, a "Happy Tune"  sounds and the display reads [DEVICE ENROLLED] for a short duration and then changes to read the tag's details. ⁴

5.  The display shows the allocated tag serial No (user No.), which is always the first free number, for example:
[T01:Tag (Prox)].

 or 
 If you wish to assign the tag to another user, for example, "User No. 5", key in [0+5] or alternatively click the  or  button until the display reads [T05:Tag (Prox)] and then press  to confirm.

 Return to step 2

The display reads [DEVICE ENROLLED] a "Happy Tune"  sounds and the display will then change to [T01:Tag (Prox)].⁷

* Refers to PowerMaster-30 only

MENUS AND FUNCTIONS

B. To Delete a Proximity Tag

1.  Enter the **USER SETTINGS** menu, select the **[PROXIMITY TAG]** option and press the **i | OK** button to confirm.¹

2.  The display will read **[ADD NEW TAG]**.
Click the  button until the display reads **[DELETE TAG]**.

3.  Press **i | OK** to confirm.

 The display will read **[T01:Tag (Prox)]** alternating with the ID number of the tag.^{2,5}

4.  Key in the tag number you wish to delete, for example, **[0+6]** or alternatively click the  or  button until the display reads the tag number, **"T06:Tag (Prox)"** and **"ID No. 300-2564"**.

 When the tag you wish to delete appears on the display, press **i | OK**.

5.  The display now reads **[<OFF> to delete]**.⁶

6.  To delete the tag press the  button.

 A "Happy Tune"  sounds and the display reads **[DELETE TAG]** and returns to step 3.⁸

Additional Information (section C.5)

1	For detailed instructions on how to select User Settings – refer to section B.1 and section B.2.
2	The display shows the 1 st Tag (Tag No.1) of the 8 tags.
3	To abort enrollment press the  button.
4	If the tag was previously enrolled in the system, the PowerMaster-10 / PowerMaster-30 display reads "ALREADY ENROLLED" and then switches to the name of the tag alternating with its ID number.
5	If no proximity tag is enrolled in the system, the display reads "NO EXISTING DEV." .
6	If you wish to abort the procedure, press the  button.
7	You can now enroll another proximity tag. You can also select another option in the User Setting menu (see section B.1 and section B.2), or quit programming (see section B.3).
8	You can now add or delete another proximity tag. You can also select another option in the User Setting menu (see section B.1 and section B.2), or quit programming (see section B.3).

C.6 Add / Delete Keyfob Transmitters

Each of the 8 PowerMaster-10 / PowerMaster-30 users may be provided with a portable keyfob transmitter to exercise better, quicker and safer arming/disarming and other control functions. Each keyfob should be assigned with a serial No. 1-8 (PowerMaster-10) / 1-32 (PowerMaster-30) and enrolled into the system correspondingly.

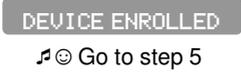

Partition Option* (For information about Partition option - see Appendix A)

If the Partition option is enabled in the control panel, each of the 32 keyfobs can be authorized by the Master User to arm and disarm any combination, or all 3 partitions, irrespective of the authorization of its corresponding user code.

- ◆ Here you can add (enroll) the 8 (PowerMaster-10) / 32 (PowerMaster-30) Keyfob transmitters and define which of the 3 partitions* each of the keyfob will be authorized to arm and disarm, or delete keyfobs as required.

1. Before anything else, gather up all keyfob units you intend to enroll and make sure they all have batteries installed and that they are active (the LED blinks upon pressing any of the buttons).
2. Carefully read the section titled "Additional Information" according to the indicated references¹ etc – see table at end of this section.

A. To Add (Enroll) a Keyfob

1.  Enter the USER SETTINGS menu, select the [KEYFOBS] option and press the  button to confirm.²
2.  The display will read [ADD NEW KEYFOB].⁴
To enroll a new keyfob press .
3.  The display offers you two alternative methods to enroll a keyfob:
A: ENROLL NOW: Press and hold the AUX * button on the selected keyfob until the LED is constantly on.¹ This procedure completes the enrollment.
- 4a.  If enrollment was successfully completed, a "Happy Tune"  sounds and the display reads [DEVICE ENROLLED] for a short duration and then changes to read the keyfob's details. Continue to step 5.⁵
- 4b.  **B: ENTER ID (Pre-enrollment):** Enter the 7-digit number that appears on the keyfob sticker and then press  to confirm. To complete the enrollment procedure see note 6 in the Additional Information table below.⁷
5.  If a valid ID was entered, a "Happy Tune"  sounds and the display reads [ID ACCEPTED] for a short duration and then changes to read the keyfob's details. Continue to step 5.
5.  The display shows the allocated keyfob serial No (user No.), which is always the first free number, and the keyfob's ID number; for example: [F01:Keyfob] alternating with [ID No. 300-5786].
 If you wish to assign the keyfob to another user, for example, "User No. 5", "

6	You can now select another option in the User Setting menu (see section B.1 and section B.2), or quit programming (see section B.3).

C.11 Programming Private Phone and SMS Reporting

The PowerMaster-10 / PowerMaster-30 system can be programmed to send various event notification messages such as alarm, arming or trouble events, to 4 private telephone subscribers by audible signal and if a GSM option is installed, also to 4 SMS telephone numbers. These reports can be programmed either instead of or in addition to the reports transmitted to the monitoring company.

Further details about the event notification by telephone and by SMS are provided in Chapter 7. Event Reporting and Control by Telephone and SMS.

You can also determine the number of times the private telephone number is dialed and whether a single acknowledge signal will stop the reporting process or an acknowledge signal from each telephone will be required before the current event is considered reported.

Here you can program:

The specific events you wish the system to report.

The 1st, 2nd, 3rd, and 4th private telephone and SMS numbers for reporting alarm and other event messages to private subscribers.

The number of redial attempts, two-way voice communication*, and whether to use a single acknowledge signal or an acknowledge signal from each telephone before the current event is considered reported.

 Carefully read the section titled "Additional Information" according to the indicated references¹ etc – see table at end of this section.

VOICE REPORT

6.  When the "operation No." you wish to schedule appears on the display, press  to confirm.

D. To Set the ON (Start) Time⁴

7.  The "start time" screen is shown on the display.⁴ To set the start time of the selected operation, press the  button.

8.  The display shows the current setting of the start time.⁵
Use the numerical keypad to set or change the operation **ON (start)** time, for example, "00:30P".⁶
-  When you are satisfied with the setting, press  to confirm.
9.   *A "Happy Tune"  sounds. The display confirms the saved start time and returns to the "start time" screen as in step 7.
To set the stop time, continue to step 10.*

E. To Set the OFF (Stop) Time

10.  Click the  or  button until the display reads "St.oP-HH:MM".
  or 
11.  When the display read the desired setting, press  to confirm.

-  The "stop time" of the selected operation is displayed.⁵
12. Use the numerical keypad to set or change the operation **OFF (stop)** time, for example, "04:00P".⁶
When you are satisfied with the setting, press  to confirm.
-   *A "Happy Tune"  sounds. The display confirms the saved stop time and returns to the "operation No" screen, as in step 5.⁷*

Additional Information (section C.13)

1	<i>For detailed instructions How to select the Setting Options – refer to section B.1 and section B.2.</i>
2	<i>If you wish to activate the selected device on every day of the week at the same time(s), use the "Daily" option. Otherwise, use the  or  buttons to select the specific day (Sunday, Monday, Tuesday...etc) you wish to activate the PGM output. You can later repeat the process for other days of the week, if desired.</i>
3	<i>The display shows "operation No 1" which is the first of the 4 ON/OFF time activations you can schedule for the day selected in the previous step. You can later repeat the process for the other 3 activations on the selected day, if desired.</i>
4	<i>Here you can select either the "start time" or "stop time" using the  or  button. Select the time in 10 minute intervals only. To erase a displayed time, press the  button. The screen also displays the selected time format.</i>
5	<i>The display shows the current start (or stop) time setting of the selected activation with the cursor blinking on the first hour digit. If no time is programmed, the time display will be blank (- :- - -).</i>
6	<i>For detailed explanation of how to set the time - refer to Section C.7 B.</i>
7	<i>To end this session and return to the previous "operation" menu, press the  button. To select other menu options or to quit programming, follow the instructions in sections B.2 and B.3.</i>

MENUS AND FUNCTIONS

Device	Device Description	Day	Operation 1	Operation 2	Operation 3	Operation 4
PGM		Monday	ON: __: __ OFF: __: __			
PGM		Tuesday	ON: __: __ OFF: __: __			
PGM		Wednesday	ON: __: __ OFF: __: __			
PGM		Thursday	ON: __: __ OFF: __: __			
PGM		Friday	ON: __: __ OFF: __: __			
PGM		Saturday	ON: __: __ OFF: __: __			
PGM		Sunday	ON: __: __ OFF: __: __			
PGM		Daily	ON: __: __ OFF: __: __			

C.14 Enabling / Disabling Voice Option*

The system allows you to enable or disable Status-dependent, pre-recorded verbal messages that are heard over the built-in loudspeaker.

◆ Here you can enable / disable the Voice Option.

i Carefully read the section titled "Additional Information" according to the indicated references¹ etc – see table at end of this section.

1.  Enter the USER SETTINGS menu, select the [VOICE OPTION] option and press the  button to confirm.¹
2.  The display shows the currently selected setting.²
 or  Click the  or  button until the display reads the desired setting, for example, "disable PROMPTS" and press  to confirm.³
3.   A "Happy Tune"  sounds. The display confirms the saved setting, then returns to step 1.^{4,5}
 Return to step 1

Additional Information (section C.14)

1	For detailed instructions on how to select the Setting Options – refer to section B.1 and section B.2.
2	<p>a. The display shows the currently selected setting (indicated by a ■ symbol), for example, "enable PROMPTS".</p> <p>b. You can now enable (voice prompts) or disable (no voice prompts) the voice option using the  or  button.</p>
3	The ■ symbol now appears next to the newly selected option.
4	You can now select another option in the User Setting menu (see section B.1 and section B.2), or quit programming (see section B.3).
5	If you have selected "enable PROMPTS", make sure that the voice prompts can be heard over the loudspeaker by pressing the   key on the control panel keypad.

* Refers to PowerMaster-30 with voice option only

EVENT REPORTING & CONTROL BY TELEPHONE AND SMS

7. Event Reporting and Control by Telephone and SMS

Event notifications by Telephone

The PowerMaster-10 / PowerMaster-30 can be programmed for selective notification of event messages to private telephone subscribers – See Chapter – 6, C.11 Programming Private Phone and SMS Reporting.

In case of alarm the following voice signal will be sent to private telephones upon event reporting:

* **FIRE:** ON - ON - ON - pause.... (- - - - -

** **BURGLAR:** ON continuously (————— ...)

*** **EMERGENCY:** 2-tone siren; like an ambulance.

To stop the alarm notification – press the "2" key on your telephone keyboard. The alarm sound will stop immediately.

The called party must acknowledge the message (as explained later on). However, if there is no response the message will be repeated as many times as possible within a 45-second time limit. When the 45 seconds are up, the PowerMaster-10 / PowerMaster-30 will disengage the line and call the next private telephone number on its list.

The called party must acknowledge the message by pressing the "2" key on the telephone keypad. As a result, the PowerMaster-10 / PowerMaster-30 may continue to notify the next programmed telephone number, or if so programmed, consider the event as reported - See Chapter – 4C.10.

Event notifications by SMS

The PowerMaster-10 / PowerMaster-30 system when equipped with a GSM unit can be programmed to send SMS event notification messages to 4 pre-selected telephone numbers - See Chapter – 4C.10. The messages can be tagged with a "House ID" name, for example, "JOHN'S HOME", see Remote Control by SMS section, command no. 9.

Example of the reported SMS messages:

- JOHN'S HOME
AWAY
- JOHN'S HOME
DISARM
- JOHN'S HOUSE
POWERMASTER-10 / POWERMASTER-30: LOW BATTERY
GARAGE: LOW BATTERY
- JOHN'S HOUSE
STATUS MESSAGE 01
(Event list is displayed)

Note: Status messages can be sent only to a calling telephone whose identity number is not blocked by the user!

Remote Control by Telephone

The PowerMaster-10 / PowerMaster-30 allows you to initiate calls from your private telephone to the PowerMaster-10 / PowerMaster-30 control panel via PSTN (landline) or GSM and to perform a variety of arming commands remotely using your telephone's keypad.

To connect to the PowerMaster-10 / PowerMaster-30 via PSTN:

1. Dial the PowerMaster-10 / PowerMaster-30 PSTN tel. No.
2. Wait for 2-4 rings then hang up. ¹
3. Wait 12-30 sec.
4. Redial PowerMaster-10 / PowerMaster-30 tel. No. (Sound will be heard for 10 sec.).
5.  [*] (to stop the sound)
6.  [User code], [#] ²
7.  [Desired command, see next table] ³

EVENT REPORTING & CONTROL BY TELEPHONE AND SMS

To connect to the PowerMaster-10 / PowerMaster-30 via GSM:

1. Dial the PowerMaster-10 / PowerMaster-30 GSM tel. No.
2. Wait for 2-4 rings then hang up. ¹
3. Wait 12-30 sec.
4. Redial PowerMaster-10 / PowerMaster-30 GSM tel. No.
5.  [User code], [#] ²
6.  [Desired command, see next table] ³

Notes:

- (1) **Alternative to steps 2 – 4:** The PowerMaster-10 / PowerMaster-30 responds in a similar way if you just dial once and wait until you hear telephone rings (in USA, for example, 11 rings).
- (2) Entering of user code is required once only.
- (3) If you wait more than 50 seconds (may change according to setup / use) without keying a command, the PowerMaster-10 / PowerMaster-30 will disconnect the line.

B. Executable Commands

	Command	Single Partition Keying Sequence / PowerMaster-10	All Partitions Keying Sequence (PowerMaster-30)	Notes
1	Disarming	[★]→[1]→[#]	[★]→[0]→[partition]→[1]→[#]	
2	Arming <u>Home</u>	[★]→[2]→[#]	[★]→[0]→[partition]→[2]→[#]	
3	Arming <u>Home-Instant</u>	[★]→[2]→[1]→[#]	[★]→[0]→[partition]→[2]→[1]→[#]	
4	Arming <u>Away</u>	[★]→[3]→[#]	[★]→[0]→[partition]→[3]→[#]	
5	Arming <u>Away-Instant</u>	[★]→[3]→[1]→[#]	[★]→[0]→[partition]→[3]→[1]→[#]	
6	Arming <u>Away-Latchkey</u>	[★]→[4]→[#]	[★]→[0]→[partition]→[4]→[#]	
7	Arming <u>Away-Instant-Latchkey</u>	[★]→[4]→[1]→[#]	[★]→[0]→[partition]→[4]→[1]→[#]	
8	Review status of specific partition (Voice version only)		[★]→[0]→[partition]→[9]→[#]	<i>Not applicable to PowerMaster-10. Operates on ALL permitted partition(s).</i>
9	Activating PGM output	[★]→[5]→[0]→[0]→[1]→[#]	[★]→[5]→[device No.]→[1]→[#]	<i>Not applicable to PowerMaster-10</i>
10	Deactivating PGM output	[★]→[5]→[0]→[0]→[0]→[#]	[★]→[5]→[device No.]→[0]→[#]	<i>Not applicable to PowerMaster-10</i>
11	Two-way voice communication (Voice version only) (see sub-par. C)	[★]→[7]→[#]	[★]→[7]→[#]	<i>Not applicable to PowerMaster-10</i>
12	Recorded message playback	[★]→[8]→[1]→[#]	[★]→[8]→[1]→[#]	<i>Not applicable to PowerMaster-10</i>
13	Recorded message start record	[★]→[8]→[2]→[#]	[★]→[8]→[2]→[#]	<i>Not applicable to PowerMaster-10</i>
14	Recorded message stop record	[★]→[8]→[3]→[#]	[★]→[8]→[3]→[#]	<i>Not applicable to PowerMaster-10</i>
15	Recorded message erase message	[★]→[8]→[4]→[#]	[★]→[8]→[4]→[#]	<i>Not applicable to PowerMaster-10</i>
16	Investigating system status (Voice version only)	[★]→[9]→[#]	[★]→[9]→[#]	<i>Not applicable to PowerMaster-10</i>

EVENT REPORTING & CONTROL BY TELEPHONE AND SMS

	Command	Single Partition Keying Sequence / PowerMaster-10	All Partitions Keying Sequence (PowerMaster-30)	Notes
17	Quit (end communication)	[*]→[9]→[9]→[#]	[*]→[9]→[9]→[#]	

Remote Control by SMS

PowerMaster-10 / PowerMaster-30 system with GSM unit can respond to SMS commands from any cellular telephone (a detailed SMS message sending process is described in the cellular telephone user's guide).

The various SMS commands are detailed in the following table.

In this table, "<code>" means a 4-digit user code and ␣ simply means blank space (see Note).

SMS Command List

	Command	Individual Partition SMS Format / PowerMaster-10	All Partitions SMS format (PowerMaster-30)	Notes
1	Arm AWAY	"AWAY␣<code>" or "AW␣<code>"	"P# AWAY␣<code>" or "P# AW␣<code>"	
2	Arm AWAY instant	"AWAY INST␣<code>" or "AWI␣<code>"	"P# AWAY INST␣<code>" or "P# AWI␣<code>"	
3	Arm AWAY Latchkey	"LATCHKEY␣<code>" or "LK␣<code>"	"P# LATCHKEY␣<code>" or "P# LK␣<code>"	
4	Arm AWAY Latchkey instant	"LATCHKEY INST␣<code>" or "LKI␣<code>"	"P# LATCHKEY INST␣<code>" or "P# LKI␣<code>"	
5	Arm HOME	"HOME␣<code>" or "HM␣<code>"	"P# HOME␣<code>" or "P# HM␣<code>"	
6	Arm HOME instant	"HOME INST␣<code>" or "HMI␣<code>"	"P# HOME INST␣<code>" or "P# HMI␣<code>"	
7	Disarm	"DISARM␣<code>" or "DA␣<code>"	"P# DISARM␣<code>" or "P# DA␣<code>"	
8	Turn PGM on	"PGM ON␣<code>"	"P# PGM ON␣<code>"	<i>Not applicable to PowerMaster-10</i>
9	Turn PGM off	"PGM OFF␣<code>"	"P# PGM OFF␣<code>"	<i>Not applicable to PowerMaster-10</i>
10	Define custom house identity (see note)	"HOUSE NAME␣<code> <house ID>" or "HN␣<code> <house ID>"	"P# HOUSE NAME␣<code> <house ID>" or "P# HN␣<code> <house ID>"	<i>House ID includes up to 16 characters, for example, JOHN'S HOUSE</i>
11	Query system status	"STATUS␣<code>" or "ST␣<code>"	"P# STATUS␣<code>" Or "P# ST␣<code>"	

Note:

The PowerMaster-10 / PowerMaster-30 may react with a delay to received SMS messages if a GPRS session is in progress at the same time.

8. Special Applications and Functions

Looking after People Left at Home

In addition to acting as an alarm system, the PowerMaster-10 / PowerMaster-30 can also be used to monitor the movement of people at home when the system is in the disarmed state (or even when armed "HOME" with perimeter protection only), and report **lack of motion** in interior zones if there is no detection of motion within predetermined time limits.

To use this characteristic, you must ask your installer to program a specific time limit beyond which lack of motion will be reported as a "**not active**" alert.

To make things clear, let us assume that an elderly, sick or handicapped person is left unattended in a protected site. This person, disabled or sick as he may be, will not stay entirely still for hours and is expected to wander into the kitchen to eat or drink, or to the bathroom for other necessities. Upon doing so, the bedroom, bathroom and kitchen motion detectors will detect his movement.

Important!

To enable the motion detectors to function during the disarmed state, all motion detectors must be configured by the installer to detect activity during disarmed state (i.e. "DISARM Activity" recommended setting ""YES + 5m delay").

If, for example, the "lack of motion" time limit is set by your installer to 6 hours, a virtual 6-hour clock will carry out a 6-hour "countdown".

If motion is detected within the 6-hour time frame, the countdown will restart from the beginning (the virtual 6-hour clock will be "reset") and no alert message will be sent out.

If no motion is detected within the 6-hour time frame in any interior zone, the control panel will send a "**not-active**" alert message to the monitoring station or to private telephones designated by the installer.

Acknowledging "low battery" condition in Keyfobs

Some regulations and institutions require the user to acknowledge when the keyfob enters the "low battery" condition. In such cases the installer will program the system to operate as follows:

If you try to disarm the system with a keyfob whose battery voltage is low, a protest beep will be heard for 15 seconds. During this period you should press again the disarm button of the keyfob or control panel (for the control panel, a user code is required) to disarm the system. If you perform this action during the 15 seconds period, a Low Bat acknowledge message will be stored in the event log.

If the disarm button is not pressed again during the 15 seconds period you will not be able to rearm the system unless you perform either one of the following actions:

- A. Press AWAY twice to arm the system.
- B. Press AWAY and then press disarm button.

Performing either of these two actions will also store the acknowledge message in the event log.

TESTING THE SYSTEM

9. Testing the System

Periodic Test

The components of your security system are designed to be maintenance-free as much as possible. Nevertheless, it is mandatory to test the system **at least once a week** and after an alarm event to verify that all system sirens, detectors, keyfobs, keypads and other peripherals function properly. Proceed as described in this section and if there is any problem, notify your installer at once.

The test is performed in three parts:

Siren Test: Each siren of the system is automatically activated for 3 seconds (outdoor sirens with low volume).

Temperature Sensor Test: When Temperature Sensors are enrolled in the system, the control panel displays the temperature of each zone in Celsius or Fahrenheit.

Other Device Test: Each of the other devices in the system is activated by the user and the display indicates which devices were not yet tested. The "it's me" indication helps to identify the untested devices if necessary. A counter also indicates the number of devices that remain untested.

① Carefully read the section titled "Additional Information" according to the indicated references¹ etc – see table at end of this section.

A. To Enter the Periodic Test Menu

-  Make sure the system is disarmed and then press the  button repeatedly until the display reads "PERIODIC TEST" and press  to confirm.¹
-  The screen will now prompt you to enter your user code.²
-  Enter your User Code.^{2 3}
➤ Go to step 4

B. To Test the Sirens

-  The display now reads [SIRENS TEST].
-  To initiate the siren test press . Immediately after pressing , all 4 LED's on the panel should light (LED test).⁴
 The display now reads [SIREN N], where "N" indicates the zone location assigned to the siren that is currently being tested.⁵
First the panel siren sounds for 3 seconds after which the PowerMaster-10 / PowerMaster-30 system will automatically repeat the procedure for the next siren enrolled in the system until all sirens are tested.⁶
You should listen to the sirens sounds and make sure that all sirens sound.
-  When all the sirens have been tested, the display reads [SIREN TESTS END]. Press the  or the  button to confirm the test and then move to the next step for zone temperature display.

C. To Display the Temperature

-  The display now reads [TEMPERATURE TEST].
-  To display the temperature of zones on the control panel, press .

Z01 24.5°C

Z01:Temp. Sensor

Guest room

The control panel reads the temperature of each zone. The display alternates between the temperature, the sensor number and the sensor location.⁸

Repeatedly click the button to review the temperature of each zone (by Temperature Sensor).

9. DEVICE TESTS END

When the temperature of all zones has been reviewed, the display reads [DEVICE TESTS END]. Press the or the button to confirm the test and then move to the next step to test the other devices.

D. To Test all other Devices

TEST ALL DEVICES

The display now reads [TEST ALL DEVICES].

10. I OK

To enter the devices test procedure press .

11. NOT ACTIVE NNN

The display now reads [NOT TESTED NNN]. NNN indicates the number of enrolled devices in the control panel that have not been tested yet. This number automatically drops one count for every tested device.

To initiate the devices test press .

Z01 NOT ACTIVE

Z01 CONTACT

FRONT DOOR

The display shows the 1st device in the list of untested devices. The display alternates between the device number, the device type (e.g. magnetic contact, keyfob, keypad, etc.), and the device location.

The test is performed by activating each device as explained in the table below.⁹

12.

Click to scroll through the list of all untested devices.¹⁰

13. DEVICE TESTS END

When all devices have been activated, the display reads [DEVICE TESTS END] followed by [READY 00:00].

READY 00:00

TESTING THE SYSTEM

<i>Additional Information (Periodic Test)</i>	
1	<i>Display shown in disarm state when all zones are secured (00:00 or other digits show present time).</i>
2	<i>If you have not already changed your personal code number, use the default setting – 1111.</i>
3	<i>If the INSTALLER CODE is used to enter the Periodic Test instead of the USER CODE, the devices LED will also provide the link quality indication – see PowerMaster-10 / PowerMaster-30 Installer Manual.</i>
4	<i>To skip the SIRENS TEST and select the other devices TEST, press .</i>
5	<i>If the panel's display reads "SIREN P", this indicates that the control panel's siren is currently being tested.</i>
6	<i>The Periodic test can be performed on a maximum of three sirens including one internal siren. Outdoor sirens are activated with low volume.</i>
7	<i>If no temperature sensor is enrolled in the system, the display reads "NO EXISTING DEV. ".</i>
8	<i>The displayed temperature can be in Celsius or Fahrenheit according to the programmed settings of the Temperature Sensor.</i>
9	<p><i>How to activate system devices during the "Periodic Test". Make sure the LED on the device lights when activated, as follows:</i></p> <p>Contact sensor: <i>Open or close the door or window protected by the contact.</i></p> <p>Motion sensors: <i>Perform a "walk test" of the detector as explained in the detector's datasheet.</i></p> <p>Smoke sensors: <i>Perform a "Diagnostic test" as explained in the detector's datasheet.</i></p> <p>Keyfob: <i>Activate any of the keyfob buttons.</i></p> <p>Keypads: <i>Perform a disarm or arm routine or press any other key that activates the LED.</i></p> <p>Repeater: <i>Follow the "Diagnostic Tests" described in the repeater's datasheet.</i></p> <p>Other devices: <i>In general, follow the "Diagnostic Tests" described in the device's datasheet or activate any of its functions.</i></p>
10	<p><i>a. Three seconds after the device is displayed, the device LED blinks continuously to assist you to identify ("it's me").</i></p> <p><i>b. To end the session, press the  button until the display reads [ TO EXIT] then press .</i></p>

10. Maintenance

Replacing the Backup Battery

The PowerMaster-10 / PowerMaster-30 uses regular electrical supply, but incorporates rechargeable backup 4.8V battery pack to ensure its proper operation during a power failure (see sticker on battery cover). After power failure the battery is recharged to its full capacity.

Upon receiving **CPU LOW BATTERY** trouble message on your LCD display when there is no power failure or immediately following a power failure, this indicates a possible fault in the battery that may require immediate battery replacement. You should contact your installer to perform this service.

Replacing Wireless Devices Batteries

The **wireless devices** supplied with your system are powered by batteries that last several years, in normal use.

However, if and when a battery becomes weak, the device itself sends a “low battery” message to the control panel, and a low battery trouble message is displayed together with the zone information (see Chapter 3 - Reviewing Trouble Information).

The respective manuals of these sensors or devices should be consulted for proper battery replacement guidelines to be performed by the installer.

Accessing 24-Hour Zones

If you wish to access a sensor defined as a 24-hour zone without causing an alarm:

- Click  - the display will read: **USER SETTING**.
- Click  - the display will read: **ENTER CODE** ____.

Key your secret 4-digit **<User Code>** - the buzzer will play the “happy Tune” (- - - —).

You have 4 minutes during which the 24-hour sensor can be opened and accessed. When the 4 minutes are up, the system will automatically revert to the normal mode.

Cleaning the Control Panel

The control panel may occasionally get stained if touched with greasy fingers, and may accumulate dust after a long period of use. Clean it only with a soft cloth or sponge moistened lightly with a mixture of water and mild detergent, and then wipe it dry.

The use of abrasives of any kind is strictly forbidden. Also never use solvents such as alcohol, kerosene, acetone or thinner. These will certainly ruin the external finish and damage the transparency of the top window.

Event Log

All events are memorized in an event log that contains up to 1000 entries. You can access this log, review the events one by one and draw functional conclusions.

If the event log fills up completely it continues to accept new events at the expense of old events - the oldest event is deleted upon registration of each new event.

The date and time of occurrence are memorized for each event. When reading the event log, events are shown in chronological order - from the newest to the oldest. The event description is shown first, then the date and time. The two displays are shown alternately several times, until you click  to move on to an older event, or until the “no action” 4-minute timeout restores the system to the normal operating mode.

Access to the event log is provided by clicking the  button and then keying your master user code.

Should you wish to get an overall view of using the log, refer to the procedure below.

MAINTENANCE

Reading the Event Log

To read the event log, proceed as follows:

-  * 🔍

-  CODE
When the PowerMaster-10 / PowerMaster-30 display reads [ENTER CODE: _], enter the current master user code.

The "Happy Tune" will sound and the PowerMaster-10 / PowerMaster-30 display will read [LIST OF EVENTS]. (see **Important Note!**)
-  i OK
Click the **i OK** button. The latest event will be shown.

The event is displayed in two parts, for example, "Z13 alarm" then "09/02/10 3:37 P".

The two displays will be shown alternately until clicking **i OK** again to move to the next event or until the event log times out (4 minutes).
-  i OK
Click the **i OK** button as many times as necessary to read all the required data.

Important Note! Entering an incorrect code 5 times in a row will initiate a 30-second penalty lockout of the keypad.

Attention: The system will not allow you to erase the event log. Only the installer is authorized to view and perform this function.

Exiting the Event Log

-  🔓 or 
Click the **🔓** or **🔒** button from anywhere within the event log. The PowerMaster-10 / PowerMaster-30 display will read [OK] TO EXIT.

-  i OK
Click the **i OK** button.

The system reverts to the normal operating mode.

APPENDIX A. PARTITIONING*

The control panel includes an optional partition feature. Partitioning is available only if your installer has enabled the feature. Once partitioning is enabled Partitioning menus are added to the system which can be viewed on the control panel's LCD display. Partitioning allows you to divide the system into three independently controllable areas with different users assigned to each partition whereby each user can arm the partition to which they are assigned.

Each user code can be assigned to a combination of up to 3 partitions and each partition can be armed or disarmed regardless of the status of the other partitions within the system. For example, you can define the garage as partition 1, the basement as partition 2, and the house as partition 3. Since each partition is independent of other partitions, you can arm or disarm each partition as desired without altering the states of the other partitions.

The system also supports a situation where an area is used by two or more partitions. For example, a reception area which is common to two offices, each of which is assigned to a separate partition, will be armed only after both offices (partitions) are armed. In the armed state the reception area will be disarmed after either office (partitions) has been disarmed to allow the user of that office to use the reception area without generating an alarm. Such an area is termed a "common area".

Selecting a Partition

When operating in partition mode the first display will read:

P1: R P2: N P3: R

Press  ; the display will read:

SELECT PARTITION

Press   and  to select the desired corresponding partition.

Note: After 5 seconds of no button press there will be a timeout and the display will revert to the All Partition display.

Arming / Disarming the System

Before continuing, make sure that Partitioning has been enabled via the Installer Mode.

Arming/Disarming All Partitions

To arm/disarm all partitions in READY mode, press the  /  or  button.

Arming/Disarming a Single Partition

To arm/disarm a single partition, press the   button on the control panel and then press the Partition number: 1; 2; or 3. Then, press the  /  or  button.

The Show Function

The show function is enabled during single/all partition(s) status and displays information that is relevant to the selected or all partitions.

Show All Partitions

In Ready mode press  , the display will show information on all partitions. Press   repeatedly to view memory / status content.

* Refers to PowerMaster-30 only

APPENDIX A. PARTITIONING

Show Single Partition

In Ready mode, press   and then press the partition number. The display will show information relevant to the selected partition. Press  repeatedly to view memory / status content

Note: After 5 seconds of no button press there will be a timeout and the display will revert to the all partition display.

Siren

A partition is alarmed when receiving an event from an alarmed device assigned to that partition. Alarmed devices do not affect partitions to which they are not assigned. A siren is common to all partitions; therefore, an alarm from one or more partitions will activate the siren.

Siren Activity

- The siren will be activated when receiving an event from an alarmed device.
- Overlapping siren activations from different partitions will not cause the duration of the siren to be extended.
- When the siren sounds, it will not stop until all alarmed partitions are disarmed. However if the siren is active due to an alarm from a common area zone, and one of the partitions assigned to this area disarms the system, the siren will also stop. In case that the alarm is initiated from a common area but continues with zones that are not assigned to a common area, the siren will not stop until all partitions assigned to the alarmed zones are disarmed.
- In case that there is a fire in partition 1 and a burglary in partition 2, the siren will sound FIRE. When partition 1 is disarmed the siren will sound BURGLAR for the remainder of the siren timeout period.

Partition Status display

Partitions status is indicated in the following manner:

P1:X P2:X P3:X

Each X value indicates a different partition state, as follows:

R	Ready
N	Not ready
A	Away
H	Home
E	Exit delay
D	Entry delay
-	Not used

KP-140 PG2/ KP-141 PG2

The wireless remote commander is used to control a partition.

Arming/Disarming a Partition

Note: Before using Partitioning, make sure it is enabled in the control panel (see PowerMaster-10 / PowerMaster-30 Installer Guide).

To arm/disarm a partition, press the desired partition number ( /  / ) then perform the arming action by pressing the  (HOME) /  (AWAY) /  (DISARM) button within a timeout period followed by the user code.

Arming Station PG2

The Arming Station PG2 virtual keypad is used to control a partition / partitions.

Arming/Disarming Partitions*

Note: Before using Partitioning, make sure it is enabled in the control panel (see *PowerMaster-30 Installer Guide*).

To arm/disarm partitions, press the desired partition number/s ( /  / ) then perform the arming action by pressing the  (HOME) /  (AWAY) /  (DISARM) button within a timeout period and then present the proximity tag.

* Refers to PowerMaster-30 only

APPENDIX B. GLOSSARY

This list of terms is arranged in alphabetical order. Any term indicated by cursive (italic) letters within the explanatory text can be looked up separately.

Abort Period: When an alarm is initiated, the internal sounder is activated first for a limited period of time which is the abort period set by the installer. If you cause an alarm accidentally, you can disarm the system within the abort period before the real sirens start and before the alarm is reported to the *remote responders*.

Alarm: There are 2 kinds of alarm:

Loud alarm - both internal and external sirens blare out constantly and the control panel reports the event by telephone or otherwise.

Silent alarm - the sirens remain silent, but the control panel reports the event by telephone or otherwise.

A state of alarm is caused by:

- Motion detected by a *motion detector*
- Change of state detected by a *magnetic contact detector* - a closed window or door is opened
- Detection of smoke by a *smoke detector*
- *Tampering* with any one of the detectors
- Pressing the two emergency buttons simultaneously on the panel's keypad.

Arming: Arming the alarm system is an action that prepares it to sound an alarm if a zone is "violated" by motion or by opening a door or window, as the case may be. The control panel may be armed in various modes (see *AWAY, HOME, INSTANT* and *LATCHKEY*).

Assigned: Refers to zones.

Associated: Refers to devices.

AWAY: This type of arming is used when the protected site is vacated entirely. All zones, *interior* and *perimeter* alike, are protected.

Bypass: Bypassed zones are zones that are not armed when arming the system. Bypassing permits arming only part of the system while allowing free movement of people within certain zones when the system is armed.

Chime Zones: Allow you to keep track of activity in the protected area while the alarm system is in the disarmed state. Whenever a chime zone is "opened", the buzzer beeps twice. The buzzer doesn't beep, however, upon closing the zone (return to normal). Residences can use this feature to annunciate visitors. Businesses can use it to signal when customers enter the premises or when personnel enter restricted areas.

Note: A 24-hour zone or a fire zone should not be designated as a chime zone, because both zone types actuate an alarm if disturbed while the system is in the disarmed state.

Although one zone or more are designated as chime zones, you can still enable or disable the chime function using the chime ON/OFF button  and  LED

Control Panel: The control panel is a cabinet that incorporates the electronic circuitry and microprocessor that control the alarm system. It collects information from various sensors, processes it and responds in various ways. It also includes the user-interface - control keys, numerical keypad, display, sounder and loudspeaker.

Default Settings: Settings that are applicable to a specific device group.

Detector: The device (apparatus) that sends an alarm, that communicates with the control panel (e.g. NEXT PG2 is a motion detector, SMD-426 PG2 is a smoke detector)

Disarming: The opposite of arming - an action that restores the control panel to the normal standby state. In this state, only *fire* and *24-hour zones* will sound an alarm if violated, but a "*emergency alarm*" may also be initiated.

Disturbed Zone: A zone in a state of alarm (this may be caused by an open window or door or by motion in the field of view of a motion detector). A disturbed zone is considered "not secured".

Forced Arming: When any one of the system zones is *disturbed* (open), the alarm system cannot be armed. One way to solve this problem is to find and eliminate the cause for zone disturbance (closing doors and windows). Another way to deal with this is to impose **forced arming** - automatic de-activation of zones that are still *disturbed* upon termination of the exit delay. Bypassed zones will not be protected throughout the arming period. Even if restored to normal (closed), bypassed zones will remain unprotected until the system is disarmed.

Permission to “force arm” is given or denied by the installer while programming the system.

HOME: This type of arming is used when people are present within the protected site. A classic example is night-time at home, when the family is about to retire to bed. With HOME arming, perimeter zones are protected but interior zones are not. Consequently, motion within interior zones will be ignored by the control panel, but disturbance of a perimeter zone will cause an alarm.

Instant: You can arm the system AWAY-INSTANT or HOME-INSTANT, thereby canceling the entry delay for all delay zones for the duration of one arming period.

For example, you may arm the control panel in the HOME-INSTANT mode and remain within the protected area. Only perimeter protection is active, and if you do not expect somebody to drop in while the system is armed, alarm upon entry via the main door is an advantage.

To disarm the system without causing an alarm, use your control keypad (which is normally accessible without disturbing a perimeter zone) or use a keyfob transmitter.

It's me: The PowerMaster-10 / PowerMaster-30 system includes a powerful device locator that helps you to identify the actual device displayed on the LCD, as follows:

While the LCD displays a zone (device), the LED on the respective device flashes indicating “it's me”. The “it's me” indication appears after a certain time delay (max. 16 seconds) and will last for as long as the LCD displays the device with a timeout of 2 minutes.

Latchkey: The Latchkey mode is a special arming mode in which designated “latchkey users” will trigger a “latchkey message” to be sent to a telephone or a pager when they disarm the system.

For example, if parents want to be sure that their child has returned from school and disarmed the system. Latchkey arming is only possible when the system is armed in the AWAY mode.

Magnetic Contact Sensor: A Magnet- controlled switch and a wireless transmitter in a shared housing. The sensor is mounted on doors and windows to detect changes in state (from closed to open and vice versa). Upon sensing that a door or window is open, the sensor transmits an “alarm” signal to the control panel. The control panel, if not armed at that time, will consider the alarm system as “not ready for arming” until the door or window is secured and the panel receives a “restored” signal from the same sensor.

Motion Sensor: A passive Infrared motion sensor. Upon sensing motion, the sensor transmits an alarm signal to the control panel. After transmission, it stands by to sense further motion.

Non-Alarm Zone: Your installer can designate a zone for roles other than alarm. For instance, a motion sensor installed in a dark stairway may be used to switch on lights automatically when someone crosses the dark area. Another example is a miniature wireless transmitter linked to a zone that controls a gate opening mechanism.

Quick Arming: Arming without a user code. The control panel does not request your user code when you press one of the arming buttons. Permission to use this arming method is given or denied by the installer while programming the system.

Remote Responder: A responder can be either a professional service provider to which the home or business owner subscribes (*a monitoring station*) or a family relation/friend who agrees to look after the protected site during absence of its occupants. The *control panel* reports events by telephone to both kinds of responders.

Restore: When a detector reverts from the state of alarm to the normal standby state, it is said to have been “restored”.

A *motion detector* restores automatically after detection of movement, and becomes ready to detect again. A *magnetic contact detector* restores only upon closure of the protected door or window.

Sensor: The sensing element: pyroelectric sensor, photo-diode, microphone, smoke optical sensor etc.

Smoke Detector, Wireless: A regular smoke detector and a wireless PowerG transceiver in a shared housing. Upon detection of smoke, the detector transmits its unique identification code accompanied by an alarm signal and various status signals to the *control panel*. Since the smoke detector is linked to a special *fire zone*, a fire alarm is initiated.

APPENDIX B. GLOSSARY

State: AWAY, HOME, AWAY-INSTANT, HOME-INSTANT, LATCHKEY, FORCED, BYPASS.

Status: AC fail, low battery, trouble, system state etc

User Codes: The PowerMaster-10 / PowerMaster-30 is designed to obey your commands, provided that they are preceded by a valid security access code. Unauthorized people do not know this code, so any attempt on their part to *disarm* or defeat the system is bound to fail. Some operations, however, can be carried out without a user code as they do not degrade the security level of the alarm system.

Zone: A zone is an area within the protected site under supervision of a specific detector. During programming, the installer allows the *control panel* to learn the detector's identity code and links it to the desired zone. Since the zone is distinguished by number and name, the control panel can report the zone status to the user and register in its memory all the events reported by the zone detector. Instant and delay zones are "on watch" only when the control panel is armed, and other (*24-hour*) zones are "on watch" regardless of whether the system is armed or not.

APPENDIX C. HOME FIRE ESCAPE PLANNING

Fire can spread rapidly through your home, leaving you a short time to escape safely. Your ability to get out depends on advance warning from smoke detectors and advance planning - a home fire escape plan that everyone in your family is familiar with and has practiced.

- Pull together everyone in your household and make an evacuation plan.
- Draw a floor plan of your home, showing two ways out of each room, including windows. Don't forget to mark the location of every smoke detector.

Test all smoke detectors (by a qualified testing laboratory) periodically, to ensure to ensure their serviceability. Replace batteries as required.

- Make sure that everyone understands the escape plan and recognizes the sound of smoke alarm. Verify that the escape routes are clear and that doors and windows can be opened easily.
- If windows or doors in your home have security bars, make sure that the bars have quick-release mechanisms on the inside, so that they can be opened immediately in an emergency case. Quick release mechanisms won't compromise your security, but they will increase your chances of safely escaping a home fire.
- Practice the escape plan at least twice a year, making sure that everybody is involved - from kids to grandparents. Allow children to master fire escape planning and practice before holding a fire drill at night when they are sleeping. The objective is to practice, not to frighten, so telling children there will be a drill before they go to bed can be as effective as a surprise drill. If children or others do not readily waken to the sound of the smoke alarm, or if there are infants or family members with mobility limitations, make sure that someone is assigned to assist them in fire drill and in the event of an emergency.
- Agree on an outside meeting place where everyone can meet after they've escaped. Remember to get out first, and then call for help. Never go back inside until the fire department gives the OK.
- Have everyone memorize the emergency phone number of the fire department. That way any member of the household can call from a cellular phone or a neighbor's home.
- Be fully prepared for a real fire: when a smoke alarm sounds, get out immediately and once you are out, stay out - leave the firefighting to the professional!
- If you live in an apartment building, make sure that you are familiar with the building evacuation plan. In case of a fire, use the stairs, never the elevator.

Tell guests or visitors to your home about your family's fire escape plan. When visiting other people's home, ask about their escape plan. If they don't have a plan in place, offer to help them make one. This is especially important when children are permitted to attend "sleepovers" at friends' homes.

FCC STATEMENT

The 915 MHz model of this sensor complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This sensor may not cause harmful interference, and (2) this sensor must accept any interference that may be received, including interference that may cause undesired operation.

The digital circuit of this sensor has been tested and found to comply with the limits for a Class B digital sensor, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in residential installations. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio and television reception. However, there is no guarantee that interference will not occur in a particular installation. If this sensor does cause such interference, which can be verified by turning the sensor off and on, the user is encouraged to eliminate the interference by one or more of the following measures:

- Re-orient or re-locate the receiving antenna.
- Increase the distance between the sensor and the receiver.
- Connect the sensor to an outlet on a circuit different from the one which supplies power to the receiver.
- Consult the dealer or an experienced radio/TV technician.

At 915 MHz the product complies with FCC requirements.

NOTE: THE MANUFACTURER IS NOT RESPONSIBLE FOR ANY RADIO or TV INTERFERENCE CAUSED BY UNAUTHORIZED MODIFICATIONS TO THIS EQUIPMENT. SUCH MODIFICATIONS COULD VOID THE USER'S AUTHORITY TO OPERATE THE EQUIPMENT.

WARNING! Owner's instruction notice: "Not to be removed by anyone except occupant".

If the "PowerMaster-10 / PowerMaster-30" causes harm to the telephone network, the telephone company will notify you in advance that temporary discontinuance of service may be required. If advance notice is not practical, you will be notified as soon as possible. Also, you will be advised of your right to file a complaint with the FCC if it is necessary.

The telephone company may make changes in its facilities, equipment, operations or procedures that could affect the operation of the equipment. If this happens the telephone company will provide advance notice in order for you to make necessary modifications to maintain uninterrupted service.

If trouble is experienced with the "PowerMaster-10 / PowerMaster-30" for repair or warranty information please contact Visonic Inc USA., 65 West Dudley Town Road, Bloomfield, CT 06002, phone number: 8 602 430 833, URL: www.visonic.com. If the equipment is causing harm to the telephone network, the telephone company may request to disconnect the equipment until the problem is resolved

W.E.E.F. Product Recycling Declaration

For information regarding the recycling of this product you must contact the company from which you originally purchased it. If you are discarding this product and not returning it for repair then you must ensure that it is returned as identified by your supplier. This product is not to be thrown away with everyday waste.

Directive 2002/96/EC Waste Electrical and Electronic Equipment.

POWERMASTER-10 / POWERMASTER-30 User's Guide D-303223 Rev 0 (6/11)

PowerMaster-10/30 G2 V15 Manual Updates

This addendum describes changes in features, functionality and interface of the PowerMaster system version 15. The changes mentioned in this addendum are updates to the accompanying Installer and User Guides of version 13 of the PowerMaster system.

The changes apply to the following features:

- **New devices**
- **Abort Fire Time**
- **Transport Protocol**
- **24H Zone Report**
- **Record Speech**
- **Operation Mode**
- **Smoke Siren Test**

New Devices

The following new devices are now supported by PowerMaster version 15:

- TOWER-30AM PG2, TOWER-30AM K9 PG2
- CLIP PG2
- KF-235 PG2
- KP-160 PG2
- GSD-441 PG2
- GSD-442 PG2
- GB-501 PG2
- TMD-560 PG2
- FLD-550 PG2

Abort Fire Time

This section is a new menu in the PowerMaster-10/30 G2 Installer's Guide - section 3.5.4

40:ABORT FIRE T.

The PowerMaster is able to provide an "abort interval" that starts upon detection of a Fire event. During this interval, the buzzer sounds a warning but the siren remains inactive and the alarm is not reported. If the user disarms the system within the allowed abort interval, the alarm is aborted.

The new menu allows configuration of the length of time allowed by the system to abort a Fire alarm.

Options: **00** (default)/**30/60/90 seconds**

UDP/TCP Protocol Selection

This section is a new menu in the PowerMaster-10/30 G2 Installer's Guide - section 3.6.3

TRANS. PROTOCOL

PowerMaster now offers a choice of IP protocol used to transfer data over the internet/GPRS.

Options: **TCP** (default); or **UDP**.

24H Zone Report

This section is a new menu in the PowerMaster-10/30 G2 Installer's Guide - section 3.6.4

66:24H ZONE RPRT (Applicable in UK only)

Define whether 24 hour (silent and audible) zones will function as normal 24 hour zones or as panic zones.

Options: **audibl as panic**; **silent as panic**; **both as panic**; and **both burglary** (default).

Record Speech

This section is an update to the PowerMaster-10/30 G2 Installer's Guide – section 3.8.2

You can record short-duration speech messages for the house identity, user names and custom zone names.

For the recording procedure follow the instructions below. Additional details and guidance are provided in section 5.2.

06:CUSTOM NAMES ... **RECORD SPEECH**

Enter "RECORD SPEECH", select the menu you wish to perform (see guidance above), then refer to the tables below which provide you with detailed explanations for each option.

Option	Instructions
HOUSE IDENTITY	<p>You can record a message to be announced automatically when events are reported to private telephones.</p> <p>While in "RECORD SPEECH", press ; the display now reads "HOUSE IDENTITY" and alternates with "REC-<2> PLAY-<5>" (this means, press the button to record and the button to play recording).</p> <p>To initiate the recording procedure, press the button continuously to record your message; "RECORD A MESSAGE" appears momentarily and then changes to "TALK NOW■■■■■" (the square boxes slowly disappear, one by one, until the end of the recording time).</p> <p>At the end of the recording process, the panel will display the following: "RECORDING ENDED". Release the button.</p> <p>Note: To check the recorded message, press the button and listen to the playback.</p>

To advance to the next stage in the recording procedure; from the "HOUSE IDENTITY" menu, click .

Option	Instructions
USER #23 VOICE	<p>You can record ten user names and assign them to users 23-32. In case of event, the relevant user name will be added to the message that will be reported via the telephone. Record user names for 23-32; the procedure is identical to the "HOUSE IDENTITY" recording procedure described above. Click to navigate between user name numbers.</p>
VOICE LOC. #1	<p>You can record user terms 1- 5 (for example, Living room, Library, etc.), and assign them to specific zones. These names are useful if none of the 26 fixed zone names are found suitable for a certain zone. When done, press to return.</p> <p>Record user terms 1-5; the procedure is identical to the "HOUSE IDENTITY" recording procedure described above. Click to navigate between user term numbers.</p>

Operation Mode

This section is a new feature in the PowerMaster-10/30 G2 Installer's Guide.

Note: The Operation Mode feature is applicable only in specific PowerMaster variants.

General Guidance – "Operation Mode" Menu

This new feature allows selection of the active operation mode of the control panel in order to comply with different standards such as EN-50131, DD243 and BS8243. Each operation mode has its own configuration, which overrides the generic panel setup.

Select between EN-50131, DD243 and BS8243

To select the desired operation mode, proceed as follows:

Step 1	Step 2	Step 3	Step 4
Select "13:OPERATION MOD" menu	Enter "01:SELECT MODE"	Select "EN-50131", "DD243" or "BS8243"	
13:OPERATION MOD	01 SELECT MODE	EN-50131 ■	↪ to Step 2

Note: If "EN-50131" is selected, the control panel will operate according to the regular settings of the control panel.

BS8243 Setup

13:OPERATION MOD **OK** **▶▶** ... **▶▶** 02:BS8243 SETUP **OK**

Enter the "02:BS8243 SETUP " menu, and press **OK** to configure BS8243 compliance standard settings.

Option	Configuration Instructions
01:DISARM OPTION	<p>Define when it is possible to disarm the system:</p> <p>entry/BS devs (default) – By keypad after the entry delay has expired and if an alarm occurred in the system. By keyfob or keyprox at all times.</p> <p>Entry/all devs - During entry delay, when the system is armed AWAY, by all devices. When not in entry delay by keyfob or keyprox only.</p> <p>entry/DD devs - During entry delay, when the system is armed AWAY, by using the keyfob or keyprox. Keypads cannot disarm at all.</p> <p>anytime/all dev – At any time and by all devices.</p>
02:ENTRY ALARM	<p>Define whether the system will report a confirmed alarm during an entry delay (see CONFIRM ALARM below).</p> <p>BS8243 (default) – An alarm initiated by another detector during the entry delay is regarded as a confirmed alarm. An additional 30 seconds delay is added to the entry delay for reporting the event (does not affect the Abort Time, see section 3.5.4).</p> <p>BS8243 no cnfrm - The panel will not send any confirmed alarm once a delay zone has been activated, until the control panel is disarmed.</p> <p>DD243 - An alarm initiated by another detector during the entry delay is not regarded as a confirmed alarm.</p> <p>EN standard - The control panel will report a confirmed alarm for the second alarm that is triggered from a different zone within the confirmation time. There are no alarm restrictions during entry delay or for the delay zone.</p>
03:END EXIT MODE	<p>Define how the exit delay is terminated or restarted according to the following options:</p> <p>door/fob only (default) - When the door is closed, or by pressing the AUX button on the keyfob¹, whichever first.</p> <p>restart>reentry - Exit delay restarts when the door is reopened during exit delay. The restart occurs once only. Restarting the exit delay is helpful if the user re-enters immediately after going out to retrieve an item that was left behind.</p> <p>door/fob/timer - When the door is closed, by pressing the AUX button on the keyfob¹, or when the exit delay has expired, whichever first.</p> <p>fob/timer - By pressing the AUX button on the keyfob¹, or when the exit delay has expired, whichever first.</p>
04:FOB/KP PANIC	<p>Define the devices that cannot trigger a panic alarm.</p> <p>BS8243 (default) – MCT-234 and MCT-237.</p> <p>DD243 – MCT-234.</p> <p>all - All devices can trigger a panic alarm</p>
05:CONFIRM ALARM	<p>Define a specific time period that if 2 successive alarms occur, the second alarm will be considered as a confirmed alarm, (see REPORT CNFRM ALARM below).</p> <p>Options: 30 (default)/45/60/90 minutes</p>
06:CONFIRM PANIC	<p>A confirmed panic alarm is reported if one of the following occurs within the confirmation time:</p> <ol style="list-style-type: none">A second panic device is activated.A second panic alarm on the same device is activated.A tamper event is activated (not from the zone / device that initiated the panic alarm). <p>Options: 4/8/12/20 (default)/24 hours and disabled</p>

¹ Applies only when the keyfob is defined as "skip exit delay" (for further details, see the keyfob's User's Guide)

07:RPT CNFM ALRM Define whether the system will report a confirmed alarm.
enable + bypass (default) - The system will report a confirmed alarm and will bypass all alarmed open zones when the siren ends or when the confirmation timer expires.
disable - The system will not report a confirmed alarm.
enable - The system will report a confirmed alarm.

08:ENTRY DELAY 1
09:ENTRY DELAY 2 Two different entry delays allow the user to enter the protected site (while the system is in the armed state) via 2 specific doors and routes without causing an alarm.
 Following entry, the user must disarm the control panel before the entry delay expires. Slow-rate warning beeps start sounding once the door is opened, until the last 10 seconds of the delay, during which the beeping rate increases. Locations No. 1 (entry delay 1) and 2 (entry delay 2) allow you to program the length of these delays.

Options: **10/15/30** (ENTRY DELAY 1 default)/**45/60** (ENTRY DELAY 2 default) **seconds;**
3/4 minutes

DD243 Setup

13:OPERATION MOD   ...  03:DD243 SETUP 

Enter the "03:DD243 SETUP" menu, and press  to configure DD243 compliance standard settings.

Option	Configuration Instructions
01:DISARM OPTION	Define when it is possible to disarm the system: entry/wl+awy kp – By the control panel when the system is armed AWAY. By keyfob or keyprox during entry delay only. entry/all devs - During entry delay, when the system is armed AWAY, by all devices. When not in entry delay by keyfob or keyprox only. entry/DD devs (default) - During entry delay, when the system is armed AWAY, by using the keyfob or keyprox. Keypads cannot disarm at all. anytime/all dev – At any time and by all devices.
02:ENTRY ALARM	Define whether the system will report a confirmed alarm during an entry delay (see CONFIRM ALARM below). DD243 (default) - An alarm initiated by another detector during the entry delay is not regarded as a confirmed alarm. EN standard - The control panel will report a confirmed alarm for the second alarm that is triggered from a different zone within the confirmation time. There are no alarm restrictions during entry delay or for the delay zone.
03:END EXIT MODE	Define how the exit delay is terminated or restarted according to the following options: door/fob only - When the door is closed, or by pressing the AUX button on the keyfob ¹ , whichever first. restart>reentry - Exit delay restarts when the door is reopened during exit delay. The restart occurs once only. Restarting the exit delay is helpful if the user re-enters immediately after going out to retrieve an item that was left behind. door/fob/timer - When the door is closed, by pressing the AUX button on the keyfob ¹ , or when the exit delay has expired, whichever first. fob/timer (default) - By pressing the AUX button on the keyfob ¹ , or when the exit delay has expired, whichever first.
04:FOB/KP PANIC	Define the devices that cannot trigger a panic alarm. DD243 – MCT-234. all - All devices can trigger a panic alarm

¹ Applies only when the keyfob is defined as "skip exit delay" (for further details, see the keyfob's User's Guide)

05:CONFIRM ALARM	Define a specific time period that if 2 successive alarms occur, the second alarm will be considered as a confirmed alarm , (see REPORT CNFRM ALARM below). Options: 30/45/60 (default)/ 90 minutes
06:CONFIRM PANIC	A confirmed panic alarm is reported if one of the following occurs within the confirmation time: a) A second panic device is activated. b) A second panic alarm on the same device is activated. c) A tamper event is activated (not from the zone / device that initiated the panic alarm). Options: 4/8/12/20 (default)/ 24 hours and disabled
07:RPT CNFM ALRM	Define whether the system will report a confirmed alarm. enable + bypass (default) - The system will report a confirmed alarm and will bypass all alarmed open zones when the siren ends or when the confirmation timer expires. disable - The system will not report a confirmed alarm. enable - The system will report a confirmed alarm.
08:ENTRY DELAY 1 09:ENTRY DELAY 2	Two different entry delays allow the user to enter the protected site (while the system is in the armed state) via 2 specific doors and routes without causing an alarm. Following entry, the user must disarm the control panel before the entry delay expires. Slow-rate warning beeps start sounding once the door is opened, until the last 10 seconds of the delay, during which the beeping rate increases. Locations No. 1 (entry delay 1) and 2 (entry delay 2) allow you to program the length of these delays. Options: 10/15/30 (ENTRY DELAY 1 default)/ 45/60 (ENTRY DELAY 2 default) seconds ; 3/4 minutes

Smoke Siren Test

Siren Test: Each siren of the system is automatically activated for 3 seconds (outdoor sirens with low volume). In addition, the system tests the siren of enrolled smoke sensors.

Using the Installer Code

This section is an update to the PowerMaster-10/30 G2 Installer's Guide – section 4.2.

Option	Instructions
SIRENS TEST	<p>You can test wireless sirens and strobes (including the control panel siren) and sirens of smoke sensors.</p> <p>To initiate the siren test press ⓘ OK. The display now reads "SIREN N". "N" indicates the zone location assigned to the siren that is currently being tested.</p> <p>First the panel siren sounds for 3 seconds after which the PowerMaster system will automatically repeat the procedure for the next siren enrolled in the system until all sirens are tested. You should listen to the sirens sounds and make sure that all sirens sound.</p> <p>Once all the sirens have been tested, the control panel will now test the sirens of smoke sensors that are enrolled in the alarm system. The display now reads "Zxx: SMOKE SIREN", where "Zxx" indicates the zone number of the smoke sensor, and alternates with "<OK> TO CONTINUE". During this time, the siren of the tested smoke sensor will sound for up to one minute.</p> <p>Press ⓘ OK to test the siren of the next smoke sensor.</p> <p>When the sirens test is complete, the display reads "SIREN TESTS END". Press the ⓘ OK or the ▶▶ button to confirm the test.</p>

Using the User Code

This section is an update to the PowerMaster-10/30 G2 User's Guide – Chapter 9 "Testing the System".

A. To Enter the Periodic Test Menu

1.  Make sure the system is disarmed and then press the  button repeatedly until the display reads **"PERIODIC TEST"** and press  to confirm.¹
2.  The screen will now prompt you to enter your user code.²
3.  Enter your User Code.^{2 3}

B. To Test the Sirens

4.  The display now reads **[SIRENS TEST]**.
5.  To initiate the siren test press . Immediately after pressing , all 4 LED's on the panel should light (LED test).⁴
 The display now reads **[SIREN N]**, where "N" indicates the zone location assigned to the siren that is currently being tested.⁵
 First the panel siren sounds for 3 seconds after which the PowerMaster system will automatically repeat the procedure for the next siren enrolled in the system until all sirens are tested.⁶
 You should listen to the sirens sounds and make sure that all sirens sound.
 Once all the sirens have been tested, the control panel will now test the sirens of smoke sensors that are enrolled in the alarm system. The display now reads **[Zxx: SMOKE SIREN]**, where "Zxx" indicates the zone number of the smoke sensor, and alternates with **[<OK> TO CONTINUE]**. During this time, the siren of the tested smoke sensor will sound for up to one minute.
 Press  to test the siren of the next smoke sensor.
6.  When all the sirens test is complete, the display reads **[SIREN TESTS END]**. Press the  or the  button to confirm the test and then move to the next step for zone temperature display.

Additional Information (Periodic Test)

1	Display shown in disarm state when all zones are secured (00:00 or other digits show present time).
2	If you have not already changed your personal code number, use the default setting – 1111.
3	If the INSTALLER CODE is used to enter the Periodic Test instead of the USER CODE, the devices LED will also provide the link quality indication – see PowerMaster Installer's Guide.
4	To skip the SIRENS TEST and select the other devices TEST, press  .
5	If the panel's display reads "SIREN P", this indicates that the control panel's siren is currently being tested.
6	The Periodic test can be performed on a maximum of two wireless sirens (including one internal siren) and the sirens of enrolled smoke sensors. Outdoor sirens are activated with low volume.
