BT REDCARE

Essential & Essential IP

Keep security simple. Get affordable alarm signalling for low-risk properties that work over 4G mobile networks or broadband.

What do they do?

- Essential always finds the best wireless connection with a SIM that can switch between 4G and 2G mobile networks.

- Essential IP works with your home or business broadband so you get a hassle-free set-up and a connection you can rely on.

- Both devices are monitored by experts that keep an eye on your property day and night. All year round.

- They send signals in seconds and report connectivity issues to the alarm receiving centre within 60 minutes.

- Better protect your property with enhanced signalling that sends more detailed information and is encrypted from end-to-end.

- Get mobile alerts when your alarm goes off and more with support from the BT Redcare app.

- They're made from recyclable plastic, packaged in cardboard and use little power. That's good for you, the environment – and your energy bill!

Police response

Ask your installer about the benefits of a police response with Essential and Essential IP.

We're a partner you can trust

We have more than thirty years' experience keeping homes and businesses safe. Our Next Generation alarm signalling systems are smarter, faster and future-ready. They can protect you no matter what your budget is or the risks you face. Plus, each one comes with a 10-year guarantee.
