

DigiAir Connected

CSL Connected Partners

In partnership with the industry's leading Panel Manufacturers DigiAir Connected combines the features of our award winning DigiAir with those of your chosen alarm panel and the added option of an end-user App.

End-User Apps

Smart Alarm Systems are growing in popularity as more end-users opt for Smartphone Apps to control smart devices in their home from their phone. Smart Alarm System Apps allow users to Set and Unset their alarm system, view and control cameras, receive real-time alerts and much more from the palm of their hand.

Until now Apps have only been available with self-monitored systems but more end-users are demanding Smartphone Apps plus reliable ARC connectivity. Now they can have both with DigiAir Connected.

Professional Monitoring

Utilising the panel's communication hardware, DigiAir Connected provides connectivity directly into the Gemini Platform. This offers Installers professionally monitored signalling designed to discourage self-monitored systems that bypass Alarm Receiving Centres (ARCs).

Gemini is our Critical Connectivity platform responsible for the integrity of nearly half a million premises throughout Europe. It checks the entire signalling route every minute providing the highest levels of resilience and reliability required by professional signalling systems.

Simplicity

The Installer simply places a single order with the ARC and will receive the manufacturer's communication device and where applicable a CSL WorldSIM. Once installed the system will offer faster UDL sessions and on-the-go access for end-users. As DigiAir Connected includes 12 month's professional monitoring, costs are spread out over the year.

CSL CONNECTED PARTNERS - BRINGING IT ALL TOGETHER

- Conforms to EN Grade 2
- WorldSIM as standard (where applicable) to increase reliability and reduce false alarms
- Option of end-user App
- Fast Format, Contact ID and extended SIA
- Faster UDL sessions
- Gemini Insight compatible for instant access to performance stats and unit management
- Removes high capital outlay – all aspects of the product are consolidated through the ARC (SIM, hardware and monitoring – depending on variant)
- Tried, tested and trusted Critical Connectivity from CSL

CHOOSE DIGIAIR CONNECTED FOR

Gemini Insight

Access to Gemini Insight web portal and CSL App for visibility on the performance of a signalling estate

End-User Apps

Provides access to the Smartphone App of your chosen panel offering your customers control of their system from the palm of their hand

Professional Monitoring

Connectivity directly into our Gemini Platform and reliable ARC monitored signalling for a keyholder or Police response

WorldSIM

WorldSIM uses a patented roaming algorithm to select the strongest network and eliminate downtime offering the best guarantee of radio coverage
