

MiniAir

Market Leaders

CSL was established in 1996 and pioneered the move from wired to wireless technology in the electronic security industry. We are now trusted to protect nearly half a million premises throughout Europe including many major retail brands.

MiniAir

Our DualCom MiniAir is the smallest radio communicator on the market. It utilises all mobile networks via our WorldSIM to signal an alarm from the protected premises to a Smartphone, alerting a keyholder.

It is designed for residential premises as an affordable upgrade for bells-only systems as it fits into any existing or legacy control panel. MiniAir also has the option to enable ARC monitoring permanently or temporarily for an end-user to protect their property.

End-User App

MiniAir embraces the Smartphone revolution and offers an easy-to-use App for end-users to arm/disarm, view event logs and receive push notifications in the event of an alarm activation.

Simplicity

It is pre-configured to enable a quick and easy 'plug and play' installation. The installer simply places the order with the ARC.

Like all CSL products, MiniAir is supported by the Gemini Platform, which has been designed with full resilience and diversity at every point. Gemini checks the entire signalling route, providing the highest levels of reliability required by professional signalling systems.

THE SMALLEST RADIO COMMUNICATOR ON THE MARKET

Benefits and Features

- Fast to Install - Plug and Play
- Easy-to-use end-user App featuring push notifications direct to you
- Remote arm/disarm and the option to view event logs
- Can be used for self-notification only or full ARC connectivity
- Works via Dial Capture or Bell Trigger
- Bolt on to legacy control panels with CID PSTN modem or I/Os
- WorldSIM as standard to increase reliability and reduce false alarms
